COURSE SLIDES · WSQ

Fundamentals of AI Ethics and Responsible AI

Course Code: TGS-2023021102

TSC: AI Ethics and Governance · ICT-CGP-2026-1.1

Conducted by Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Version 7.0 · 9 September 2026

© 2026 Tertiary Infotech Academy Pte Ltd

COURSE ADMINISTRATION

00

Welcome and Course Orientation

Expectations · learning outcomes · assessment · course access

© 2026 Tertiary Infotech Academy Pte Ltd

Digital Attendance (Mandatory)

1 AM attendance

Scan the SSG digital-attendance QR code when the trainer displays it.

TRAQOM

2 PM attendance

Repeat after lunch; confirm the submission screen before closing.

TRAQOM

3 Assessment attendance

Complete the separate assessment attendance at the scheduled time.

TRAQOM

4 Funding requirement

Maintain at least 75% attendance and complete all prescribed assessments.

TRAQOM

THE POINT

TRAQOM attendance is a formal funding record—check each submission before continuing.

Let's Know Each Other

1 Name

How would you like the class to address you?

INTRODUCTIONS

2 Role

Where do AI-assisted decisions appear in your work?

INTRODUCTIONS

3 Experience

Which AI tools or models have you used?

INTRODUCTIONS

4 Goal

What governance decision do you want to make better?

INTRODUCTIONS

THE POINT

Listen for different perspectives: AI affects teams and stakeholders differently.

© 2026 Tertiary Infotech Academy Pte Ltd

Ground Rules

1 Participate

Questions and respectful challenge improve the class.

HOUSEKEEPING

2 Protect data

Use only supplied mock data; never paste confidential information.

HOUSEKEEPING

3 Be evidence-led

Separate facts, assumptions, values and recommendations.

HOUSEKEEPING

4 Stay human-centric

Discuss impacts on people, not only model performance.

HOUSEKEEPING

THE POINT

A psychologically safe class supports rigorous ethical reasoning.

© 2026 Tertiary Infotech Academy Pte Ltd

COURSE FACTS

Course at a Glance

1 Programme

WSQ · beginner level · instructor-led and hands-on.

COURSE FACTS

2 Duration

2 days · 16 total contact hours · includes 2 hours of assessment.

COURSE FACTS

3 TSC

AI Ethics and Governance · ICT-CGP-2026-1.1.

COURSE FACTS

4 Assessment

Written Assessment (SAQ) + Case Study · open book.

COURSE FACTS

THE POINT

The course moves from principles to a defensible governance decision.

© 2026 Tertiary Infotech Academy Pte Ltd

CONSTRUCTIVE ALIGNMENT

Course Proposal Alignment

1 LU1 · LO1

Identify AI ethics and governance principles · K1 frameworks · K2 principles · A1 identify principles and processes.

CONSTRUCTIVE

2 LU2 · LO2

Apply an AI ethics and governance framework to AI projects · K3 processes · K4 code · A2 uphold · A3 govern deployment.

CONSTRUCTIVE

3 Training allocation

LU1: Day 1, 09:00–17:00 excluding lunch = 7 hours · LU2: Day 1, 17:00–18:00 plus Day 2, 09:00–16:00 excluding lunch = 7 hours.

CONSTRUCTIVE

4 Assessment

WA Q1–Q4 assess K1–K4 · Case Study Q1–Q3 assess A1–A3 · 2 hours total.

CONSTRUCTIVE

THE POINT

The approved Course Proposal maps every knowledge and ability statement to teaching, practice and assessment.

© 2026 Tertiary Infotech Academy Pte Ltd

TSC MAPPING

TSC Knowledge and Abilities

1 **K1–K2**

Frameworks and principles for AI ethics and governance.

TSC MAPPING

2 **K3–K4**

Governance processes and relevant codes of conduct.

TSC MAPPING

3 **A1**

Identify principles and processes.

TSC MAPPING

4 **A2–A3**

Uphold governance duties and apply them to AI projects.

TSC MAPPING

THE POINT

The activity sequence provides direct practice for every K and A code.

© 2026 Tertiary Infotech Academy Pte Ltd

2 DAYS · 16 HOURS

Lesson Plan · Day 1

09:00–09:30	Administration, introductions and AM attendance
09:30–10:30	Module 1 · AI Ethics Foundations
10:30–10:40	Tea break
10:40–11:25	Activity 1 · Use-case and stakeholder map
11:25–12:25	Module 2 · Responsible AI Principles
12:25–13:10	Activity 2 · AI Code of Conduct
13:10–14:10	Lunch break
14:10–14:50	Module 3 · AI Governance Frameworks
14:50–15:50	Activity 3 · Risk tiering and RACI
15:50–16:00	Tea break
16:00–17:00	Module 4 · AI Governance Lifecycle
17:00–17:50	Activity 4 · Impact assessment and risk register
17:50–18:00	Day 1 recap and PM attendance

© 2026 Tertiary Infotech Academy Pte Ltd

2 DAYS · 16 HOURS

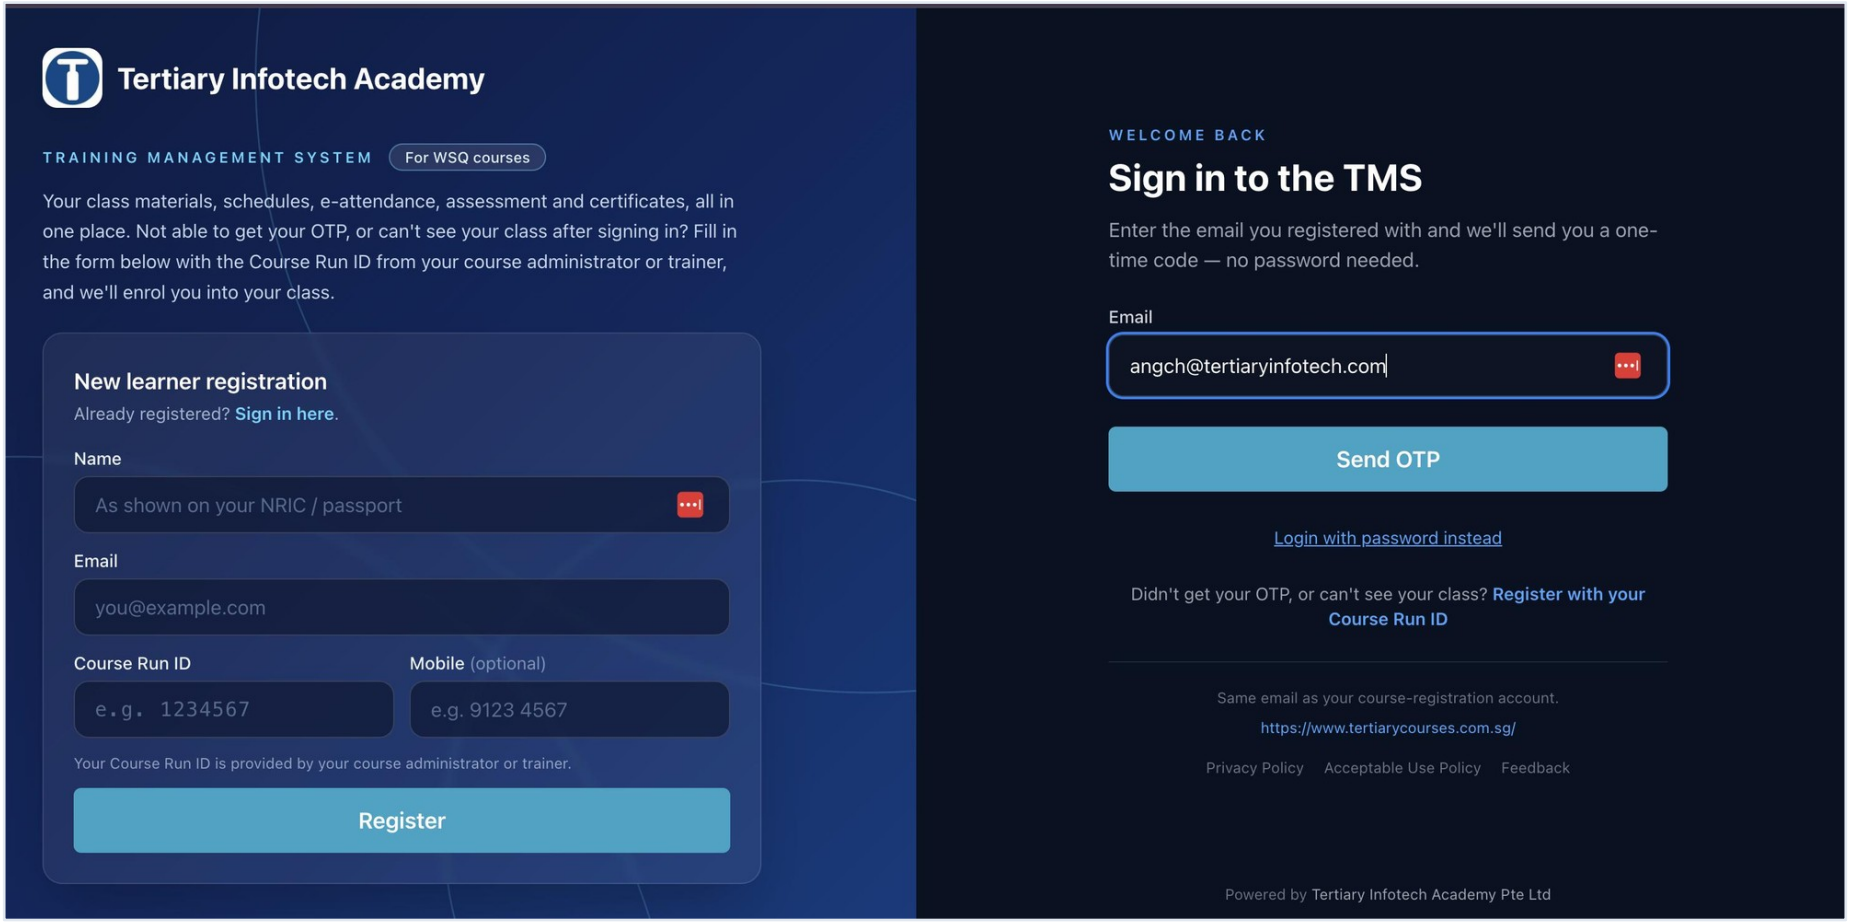

Lesson Plan · Day 2

09:00–09:10	Day 1 recap and AM attendance
09:10–09:50	Module 5 · Fairness and Explainability
09:50–10:00	Tea break
10:00–11:00	Activity 5 · Fairness and explainability audit
11:00–11:35	Module 6 · Data Governance and Privacy
11:35–12:20	Activity 6 · Data governance controls
12:20–13:20	Lunch break
13:20–13:50	Module 7 · Generative AI Security and Copyright
13:50–14:00	Tea break
14:00–14:50	Activity 7 · GenAI threat model
14:50–15:20	Module 8 · Human Oversight and Accountability
15:20–15:50	Activity 8 · Oversight and governance decision
15:50–16:00	Assessment briefing and PM attendance
16:00–17:00	Written Assessment (SAQ)
17:00–18:00	Case Study assessment

ASSESSMENT BRIEFING

Briefing for Assessment

1 Materials

Open book: approved slides and Learner Guide only.

ASSESSMENT BR

2 Conduct

No discussion, photos, recording or unauthorised assistance.

ASSESSMENT BR

3 Submission

Complete answers in the provided documents and upload to LMS.

ASSESSMENT BR

4 Competency

All required K and A criteria must be demonstrated.

ASSESSMENT BR

THE POINT

Ask for clarification before the assessment begins; follow the assessor's instructions.

© 2026 Tertiary Infotech Academy Pte Ltd

ASSESSMENT

Final Assessment

1 WA (SAQ)

4 open-ended questions · K1–K4 · 1 hour.

ASSESSMENT

2 Case Study

3 open-ended questions · A1–A3 · 1 hour.

ASSESSMENT

3 Format

Open book using approved course materials.

ASSESSMENT

4 Appeal

The assessor explains feedback, sign-off and appeal rights.

ASSESSMENT

THE POINT

The assessment mirrors the approved instrument: 4 WA questions and 3 Case Study questions.

© 2026 Tertiary Infotech Academy Pte Ltd

ASSESSMENT DAY

Assessment Flow

Complete the steps in sequence and confirm each submission.

© 2026 Tertiary Infotech Academy Pte Ltd

MODULE 1 · K1

01

AI Ethics Foundations

From AI capability to sociotechnical impact

© 2026 Tertiary Infotech Academy Pte Ltd

What AI systems actually do

1 Perceive

Extract patterns from images, sound, text and sensor data.

MODULE 1

2 Predict

Estimate a label, score, probability or future outcome.

MODULE 1

3 Recommend

Rank options or propose a course of action.

MODULE 1

4 Generate

Produce new text, images, audio, video or code probabilistically.

MODULE 1

THE POINT

Ethical risk follows the decision and impact, not the marketing label attached to the model.

© 2026 Tertiary Infotech Academy Pte Ltd

Why AI ethics is operational

1 Scale

A single defect can affect thousands of people before anyone notices.

MODULE 1

2 Opacity

Complex pipelines can hide why a result changed or who is accountable.

MODULE 1

3 Power

AI can shift opportunities, burdens and decision authority.

MODULE 1

4 Feedback

Predictions influence behaviour and create the next training data.

MODULE 1

THE POINT

AI ethics is how an organisation turns values into decisions, controls, evidence and redress.

© 2026 Tertiary Infotech Academy Pte Ltd

The AI system is sociotechnical

1 People

Owners, developers, users, reviewers and affected persons.

MODULE 1

2 Process

Policies, approvals, escalation routes and operating procedures.

MODULE 1

3 Technology

Data, models, prompts, tools, interfaces and infrastructure.

MODULE 1

4 Context

Law, culture, sector, incentives and the consequences of failure.

MODULE 1

THE POINT

A model can be technically accurate while the overall system remains harmful or unfair.

© 2026 Tertiary Infotech Academy Pte Ltd

Risk, harm and benefit

1 Risk

Likelihood multiplied by severity, adjusted for exposure and control strength.

MODULE 1

2 Harm

Impact on rights, safety, opportunity, dignity, privacy or the environment.

MODULE 1

3 Benefit

Value to individuals, organisations and society—not only efficiency.

MODULE 1

4 Trade-off

A justified balance with documented residual risk and accountable approval.

MODULE 1

THE POINT

Responsible AI seeks proportionate controls, not zero risk and not innovation at any cost.

© 2026 Tertiary Infotech Academy Pte Ltd

Three ethical lenses

1 Consequences

Which option produces the greatest overall benefit and least harm?

MODULE 1

2 Duties and rights

What obligations and non-negotiable rights must be respected?

MODULE 1

3 Virtues and values

What would a trustworthy, fair and responsible organisation do?

MODULE 1

4 Public reason

Could the decision and rationale be explained to affected people?

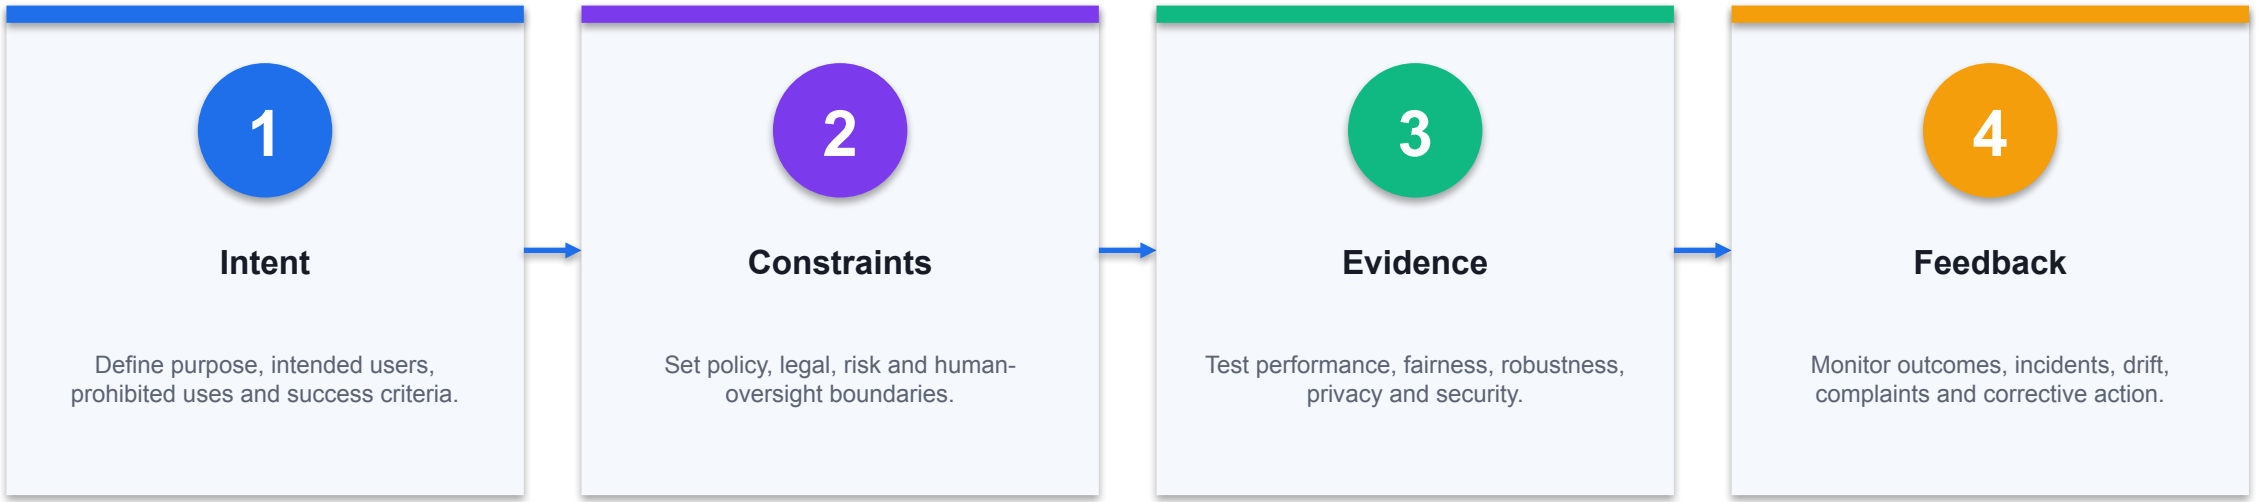

MODULE 1

THE POINT

Using more than one lens exposes blind spots that a single moral theory can miss.

© 2026 Tertiary Infotech Academy Pte Ltd

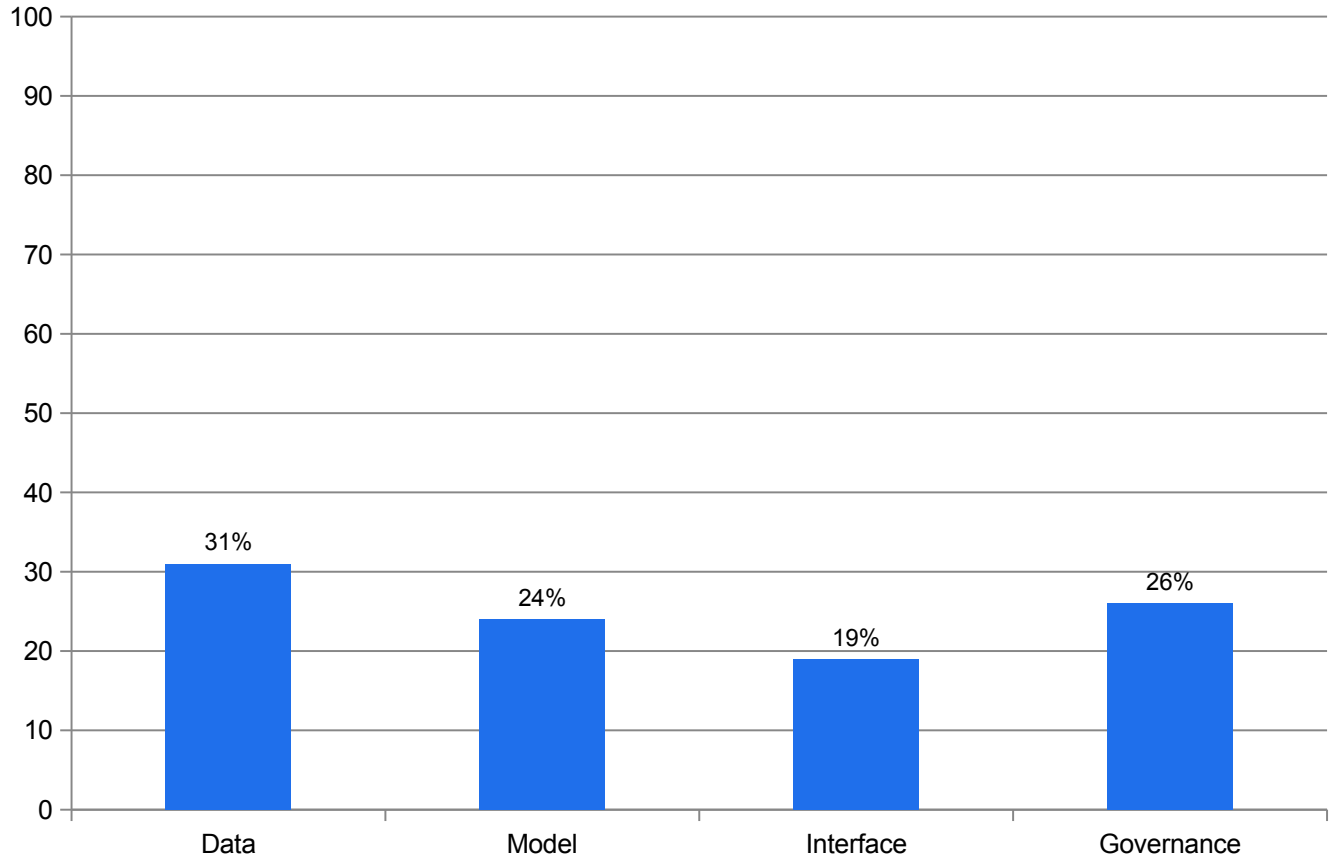

Responsible AI as a control system

A principle becomes real only when it has an owner, control, metric and evidence trail.

© 2026 Tertiary Infotech Academy Pte Ltd

AI incidents have multiple causes

Data

Unrepresentative samples, weak labels, leakage or unlawful collection.

Model

Poor calibration, brittleness, opacity or unsafe generalisation.

Interface

Automation bias, misleading confidence or no meaningful choice.

Governance

No owner, weak monitoring, unclear escalation or ignored warnings.

Illustrative teaching data shows that non-model causes can account for most incident pathways.

© 2026 Tertiary Infotech Academy Pte Ltd

Stakeholder impact map

1 Decision makers

Sponsor, product owner and accountable executive.

MODULE 1

2 Operators

Developers, vendors, reviewers and frontline staff.

MODULE 1

3 Affected people

Applicants, customers, employees and communities.

MODULE 1

4 Assurance actors

Risk, legal, security, audit, regulators and civil society.

MODULE 1

THE POINT

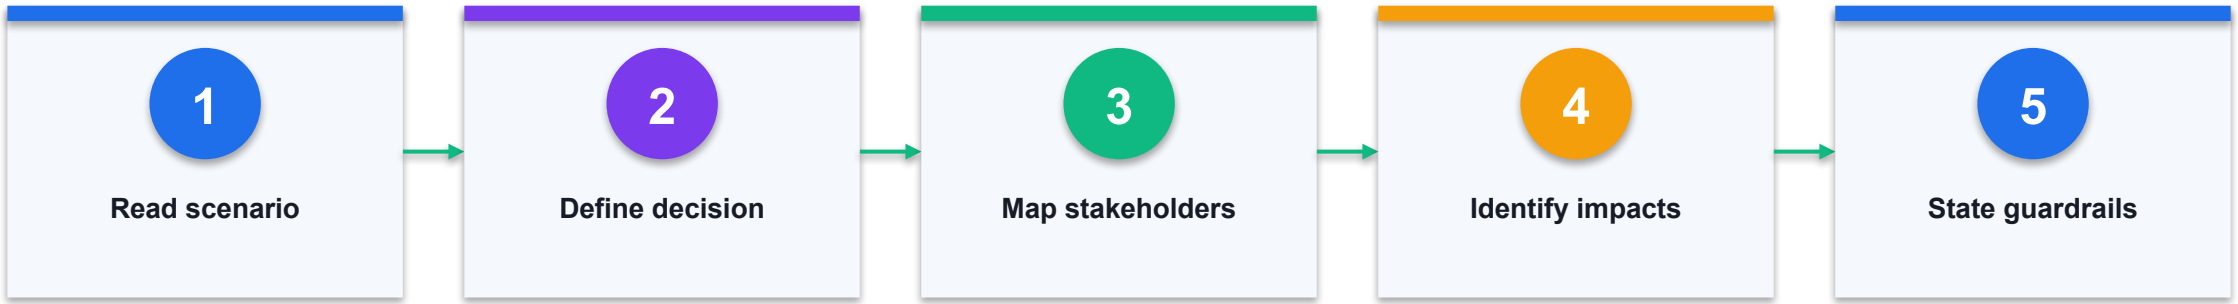

Those who bear the risk may not be the same people who receive the benefit.

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 1 · 45 MIN

Map an AI Use Case and Its Stakeholders

Identify the system purpose, decision, stakeholders, benefits, harms and ethical tensions (A1).

YOU'LL PRODUCE **Completed AI Use-Case & Stakeholder Canvas**

Tools: Prompt PDF, stakeholder template, scenario brief · Detailed procedure: Learner Guide, Activity 1

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 1 · ACCEPTANCE CHECK

Verify · Map an AI Use Case and Its Stakeholders

PASS WHEN The canvas names the decision, at least six stakeholders, two benefits, four harms, three prohibited uses and an accountable owner.

- ✓ AI-assisted decision is explicit
- ✓ Affected people are separate from users
- ✓ Benefits and harms name who experiences them
- ✓ Assumptions are labelled
- ✓ Prohibited uses and owner are present

If evidence is incomplete, record the gap, owner and due date—do not mark the control effective.

© 2026 Tertiary Infotech Academy Pte Ltd

MODULE 2 · K2

02

Responsible AI Principles

Translate values into observable behaviour

© 2026 Tertiary Infotech Academy Pte Ltd

Principles form a connected system

1 Fairness

Comparable people receive equitable treatment and outcomes.

MODULE 2

2 Transparency

People know when AI is used, for what purpose and by whom.

MODULE 2

3 Accountability

Named owners remain answerable for decisions and controls.

MODULE 2

4 Human-centricity

Human well-being, agency and safety remain primary.

MODULE 2

THE POINT

Principles reinforce each other: explainability supports contestability, which supports accountability.

© 2026 Tertiary Infotech Academy Pte Ltd

Fairness is a design decision

1 Define groups

Select protected or vulnerable groups relevant to the context.

MODULE 2

2 Define outcome

State what favourable and harmful outcomes mean.

MODULE 2

3 Choose metric

Pick a fairness measure that matches the decision pathway.

MODULE 2

4 Accept trade-offs

Document who benefits, who is burdened and why.

MODULE 2

THE POINT

There is no universal fairness metric; the defensible choice begins with context and harm.

© 2026 Tertiary Infotech Academy Pte Ltd

Transparency has layers

1 System notice

Disclose that AI is involved and what role it plays.

MODULE 2

2 Process clarity

Explain inputs, workflow, controls and decision authority.

MODULE 2

3 Technical evidence

Provide model cards, data sheets, tests and audit logs.

MODULE 2

4 Outcome reason

Give the affected person a useful reason and next step.

MODULE 2

THE POINT

Transparency is audience-specific: a user needs clarity; an auditor needs traceable evidence.

© 2026 Tertiary Infotech Academy Pte Ltd

Explainability, interpretability, transparency

1 Interpretability

How directly a human can understand the model mechanism.

MODULE 2

2 Explainability

A post-hoc account of factors influencing a result.

MODULE 2

3 Transparency

Information about purpose, data, process, limits and ownership.

MODULE 2

4 Contestability

A practical way to question, correct or appeal a decision.

MODULE 2

THE POINT

An explanation is only useful when it supports an action, not merely curiosity.

© 2026 Tertiary Infotech Academy Pte Ltd

Privacy and data stewardship

1 Purpose

Collect and use data for clear, legitimate and compatible purposes.

MODULE 2

2 Minimisation

Use only what is necessary for the stated objective.

MODULE 2

3 Protection

Apply access, encryption, retention and disclosure controls.

MODULE 2

4 Agency

Enable notice, consent where appropriate, correction and withdrawal.

MODULE 2

THE POINT

Privacy is a lifecycle obligation, not a one-time consent checkbox.

© 2026 Tertiary Infotech Academy Pte Ltd

Safety, security and robustness

1 Safety

Prevent unacceptable physical, psychological or societal harm.

MODULE 2

2 Security

Protect confidentiality, integrity and availability against threats.

MODULE 2

3 Robustness

Maintain acceptable behaviour under variation and attack.

MODULE 2

4 Resilience

Detect failure, contain impact and recover safely.

MODULE 2

THE POINT

Security protects the system; safety protects people; responsible AI requires both.

© 2026 Tertiary Infotech Academy Pte Ltd

Accountability needs evidence

1 Owner

A named role accepts responsibility for the system and outcome.

MODULE 2

2 Decision record

Approvals, assumptions, exceptions and residual risk are logged.

MODULE 2

3 Assurance

Independent review tests whether controls work as claimed.

MODULE 2

4 Remedy

Affected people have a route to correction, appeal and redress.

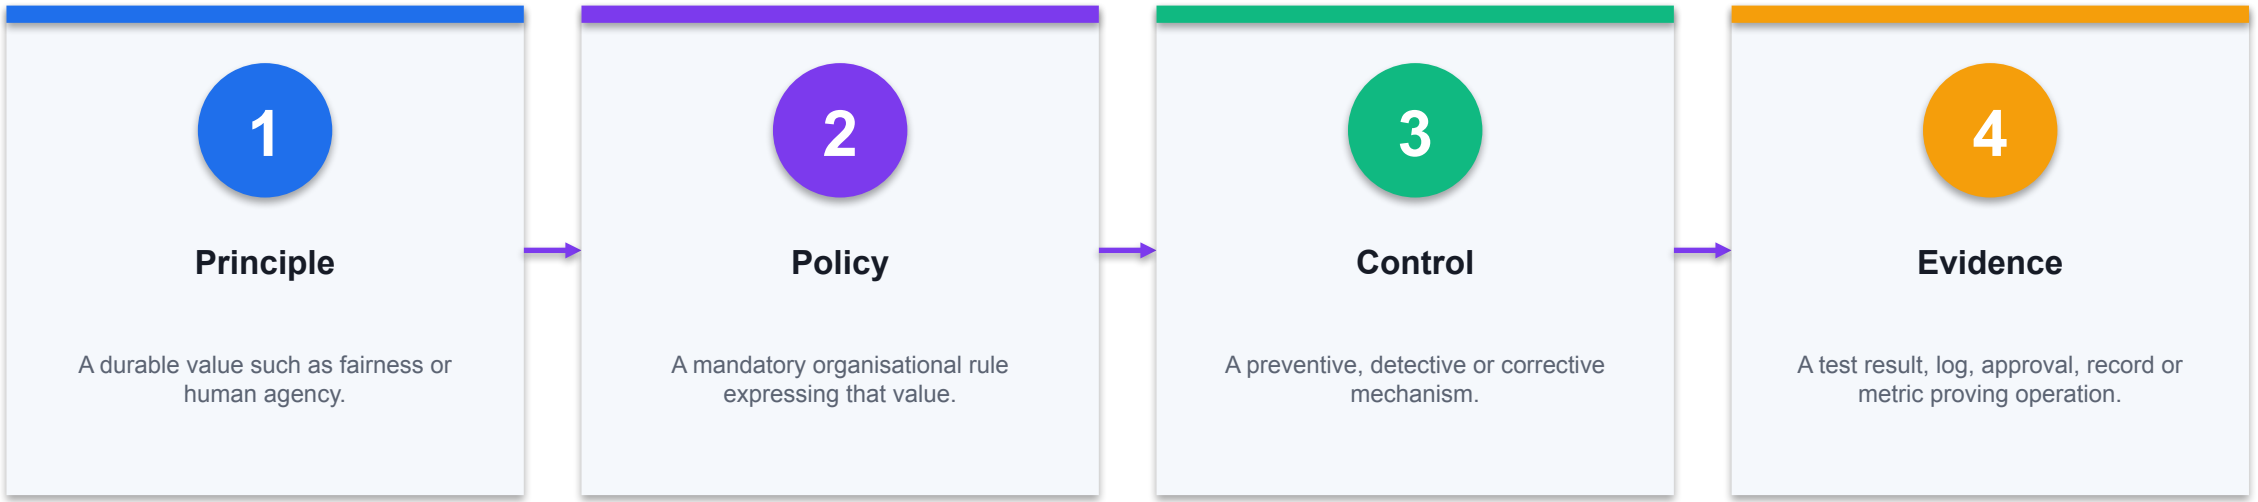

MODULE 2

THE POINT

If nobody can show the decision record, accountability exists only on paper.

© 2026 Tertiary Infotech Academy Pte Ltd

Principles to policy to practice

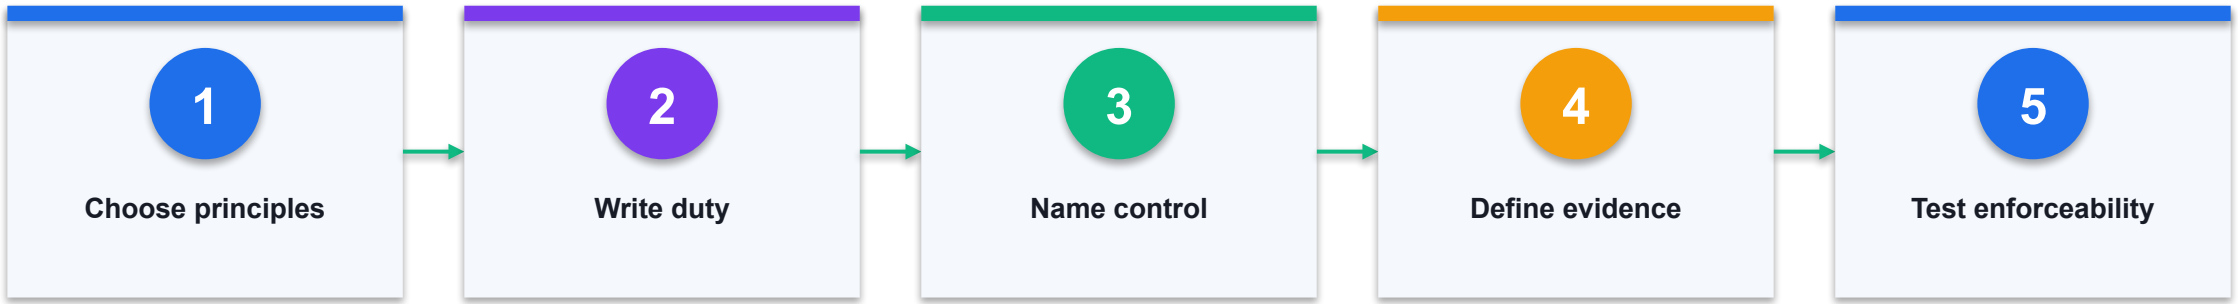

Write every code-of-conduct statement so that compliance can be observed and audited.

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 2 · 45 MIN

Turn Principles into an AI Code of Conduct

Translate responsible AI principles into observable duties, controls and evidence (A1, A2).

YOU'LL PRODUCE **AI Ethics Code of Conduct with control statements**

Tools: Prompt PDF, policy template, principle-control matrix · Detailed procedure: Learner Guide, Activity 2

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 2 · ACCEPTANCE CHECK

Verify · Turn Principles into an AI Code of Conduct

PASS WHEN **Every principle has a mandatory duty, owner, control, frequency/trigger, evidence and failure indicator.**

- ✓ Statements use must, not should
- ✓ Each control has one owner
- ✓ Evidence is named
- ✓ Exception route is documented
- ✓ Human agency and redress are covered

If evidence is incomplete, record the gap, owner and due date—do not mark the control effective.

© 2026 Tertiary Infotech Academy Pte Ltd

COURSE PAUSE

00

Lunch Break

45 minutes

© 2026 Tertiary Infotech Academy Pte Ltd

MODULE 3 · K1 · K2 · A1

03

AI Governance Frameworks

Use complementary frameworks without creating checklist theatre

© 2026 Tertiary Infotech Academy Pte Ltd

Singapore Model AI Governance Framework

1 Internal governance

Clear roles, responsibilities, SOPs, training and risk ownership.

MODULE 3

2 Human involvement

Set the appropriate degree of human control by harm and reversibility.

MODULE 3

3 Operations

Manage data, bias, explainability, robustness and model maintenance.

MODULE 3

4 Stakeholder interaction

Communicate clearly and provide feedback or contest routes.

MODULE 3

THE POINT

Singapore's framework translates explainable, transparent, fair and human-centric principles into practice.

© 2026 Tertiary Infotech Academy Pte Ltd

AI Verify assurance model

1 Governance tests

Document processes, oversight, accountability and transparency.

MODULE 3

2 Technical tests

Measure fairness, robustness, explainability and reproducibility.

MODULE 3

3 Evidence

Combine test outputs with context, limitations and human judgement.

MODULE 3

4 Communication

Produce a transparent report for internal and external stakeholders.

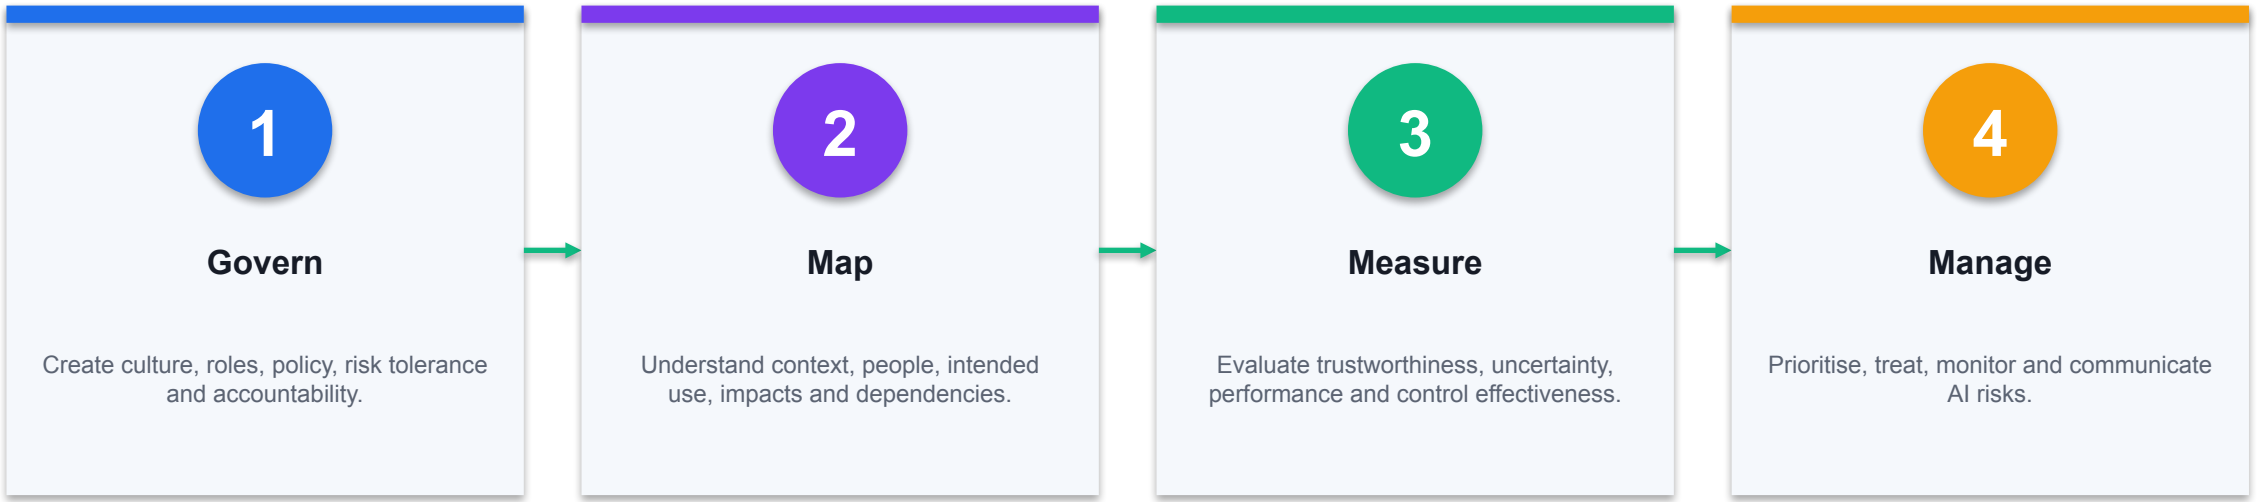

MODULE 3

THE POINT

Testing supports—not replaces—the organisation's responsibility to interpret results and manage risk.

© 2026 Tertiary Infotech Academy Pte Ltd

NIST AI RMF core

Govern is cross-cutting; Map, Measure and Manage iterate throughout the lifecycle.

© 2026 Tertiary Infotech Academy Pte Ltd

ISO/IEC 42001 management system

1 Plan

Establish context, policy, objectives, risks and AI impact processes.

MODULE 3

2 Do

Operate controls, competence, communication and documented processes.

MODULE 3

3 Check

Monitor, measure, audit and conduct management review.

MODULE 3

4 Act

Correct nonconformities and continually improve the AI management system.

MODULE 3

THE POINT

ISO 42001 governs the organisational system around AI, not the technical quality of one model alone.

© 2026 Tertiary Infotech Academy Pte Ltd

Frameworks serve different questions

1 Singapore MGF

How should an organisation operationalise trustworthy AI?

MODULE 3

2 AI Verify

How can governance and technical claims be tested and evidenced?

MODULE 3

3 NIST AI RMF

How do we structure continuous AI risk management?

MODULE 3

4 ISO 42001

How do we manage and continually improve an enterprise AIMS?

MODULE 3

THE POINT

Crosswalk overlapping requirements once; do not make teams complete four disconnected checklists.

© 2026 Tertiary Infotech Academy Pte Ltd

AI governance operating model

1 Board and executive

Set values, risk appetite, accountability and resources.

MODULE 3

2 AI governance council

Approve high-risk uses, exceptions and remediation.

MODULE 3

3 Product and engineering

Build controls, tests, documentation and monitoring.

MODULE 3

4 Independent assurance

Challenge evidence and verify control effectiveness.

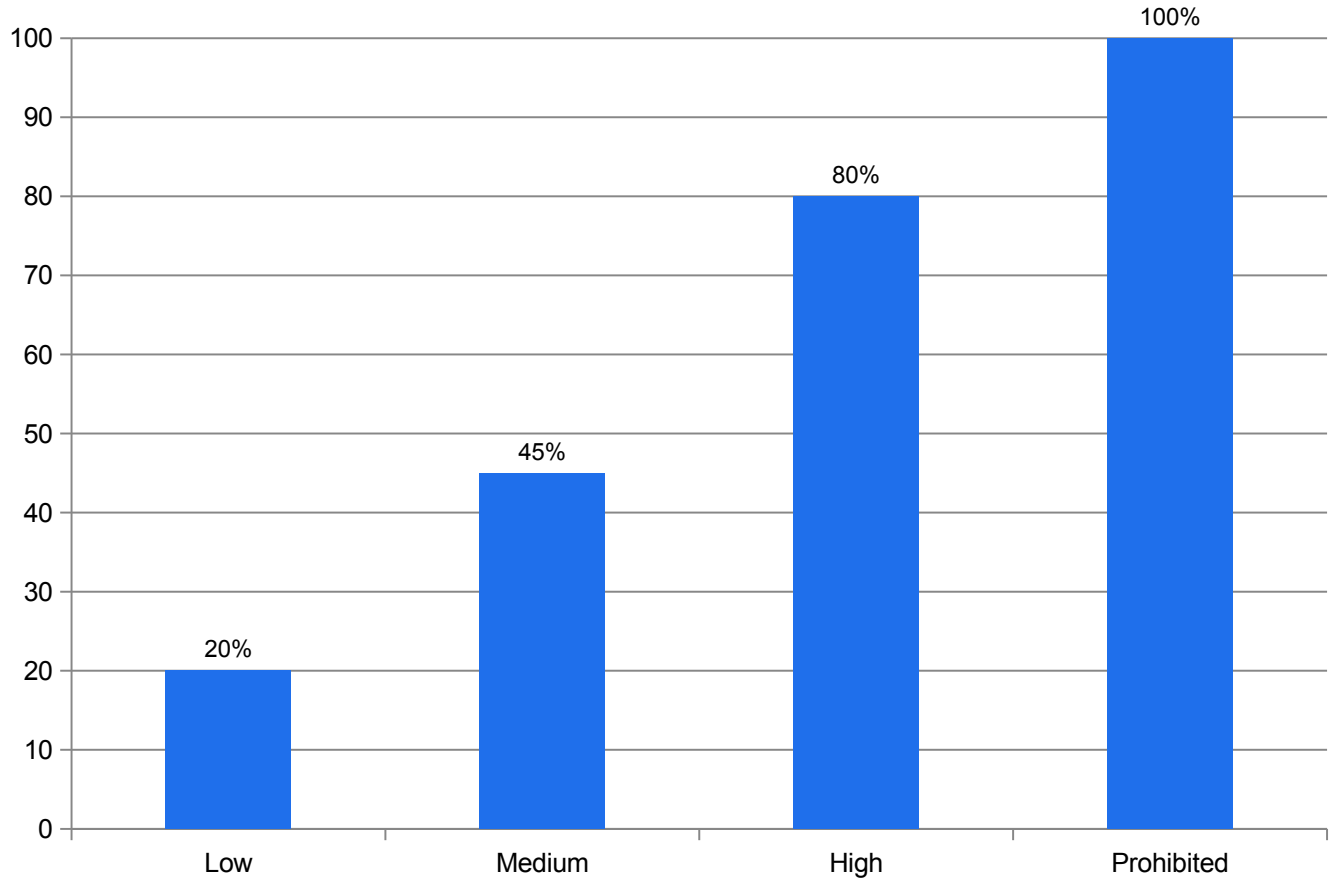

MODULE 3

THE POINT

The first line owns the risk; the second guides and challenges; the third assures independently.

© 2026 Tertiary Infotech Academy Pte Ltd

Use-case inventory and risk tiers

Inventory

Record owner, purpose, users, data, model, vendor and deployment state.

Inherent risk

Assess impact before controls using harm, scale and vulnerability.

Control profile

Match testing, approvals and oversight to the risk tier.

Residual risk

Approve, reduce, transfer, avoid or monitor after controls.

Control intensity rises with inherent risk; prohibited uses are stopped rather than mitigated into approval.

© 2026 Tertiary Infotech Academy Pte Ltd

Governance anti-patterns

1 Policy-only

A principle document exists but product teams lack controls and evidence.

MODULE 3

2 Committee bottleneck

Every decision waits for one central group regardless of risk.

MODULE 3

3 Vendor blind trust

Contract language substitutes for technical and operational assurance.

MODULE 3

4 Launch-and-forget

Approval occurs once with no monitoring, incident route or review trigger.

MODULE 3

THE POINT

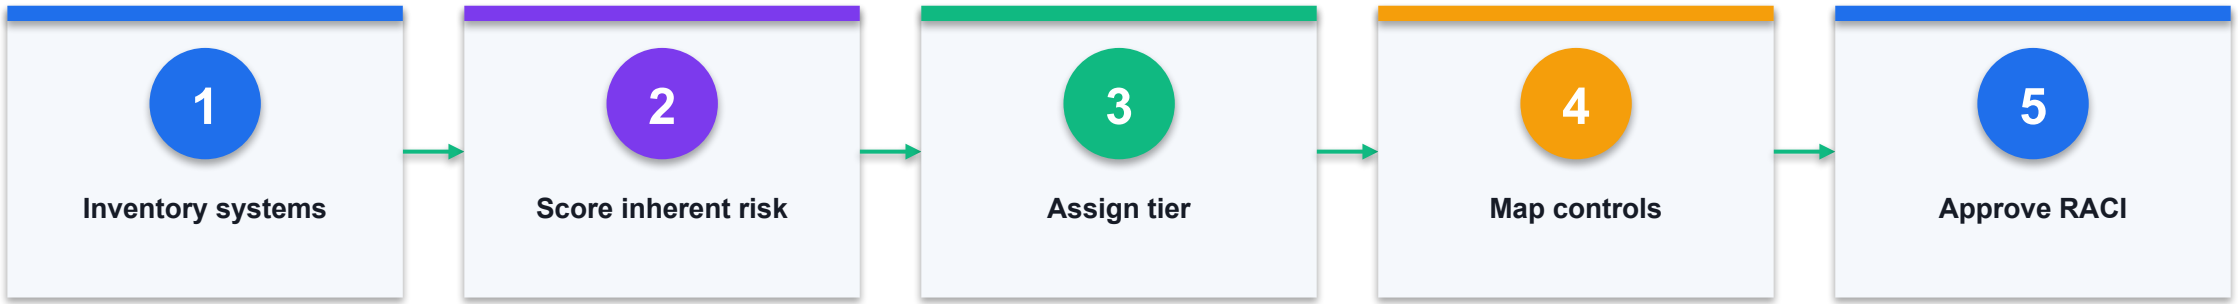

Effective governance is risk-based, distributed, evidence-led and continuous.

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 3 · 60 MIN

Tier AI Risk and Build a Governance RACI

Apply governance frameworks to classify AI use cases and assign decision rights (A1, A3).

YOU'LL PRODUCE **AI inventory, risk-tier rationale and governance RACI**

Tools: Prompt PDF, AI inventory CSV, RACI template · Detailed procedure: Learner Guide, Activity 3

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 3 · ACCEPTANCE CHECK

Verify · Tier AI Risk and Build a Governance RACI

PASS WHEN **All use cases have a defensible tier, minimum control profile, review cadence and unambiguous RACI.**

- ✓ Inventory is complete
- ✓ Scores have reasons
- ✓ Prohibited-use rule exists
- ✓ One Accountable role per decision
- ✓ Framework controls are crosswalked

If evidence is incomplete, record the gap, owner and due date—do not mark the control effective.

© 2026 Tertiary Infotech Academy Pte Ltd

MODULE 4 · K3 · A1 · A3

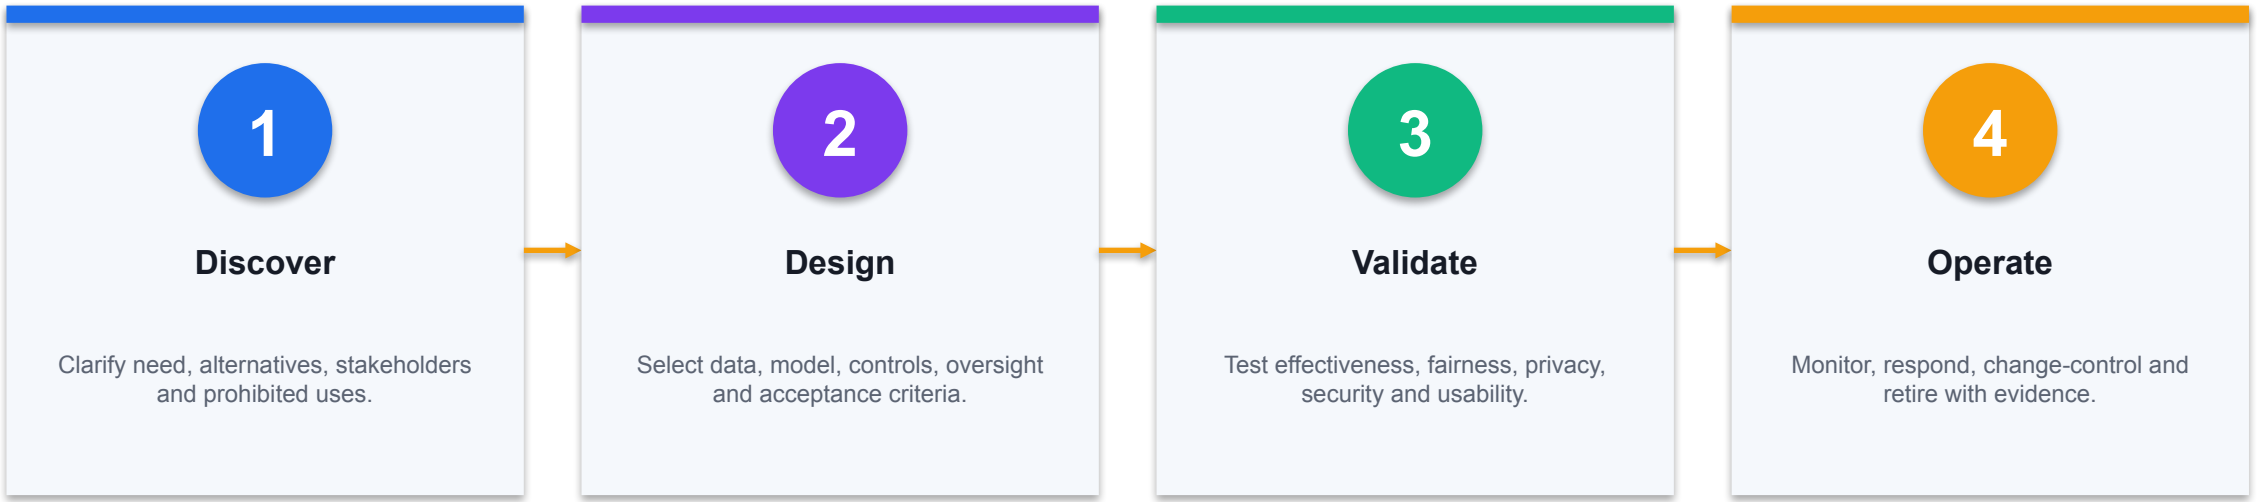

04

AI Governance Lifecycle

Control the system from idea to retirement

© 2026 Tertiary Infotech Academy Pte Ltd

Lifecycle governance gates

A gate is a decision with entry criteria, evidence, accountable approver and recorded outcome.

© 2026 Tertiary Infotech Academy Pte Ltd

AI impact assessment

1 Context

Purpose, decision, scale, affected people and deployment environment.

MODULE 4

2 Impact

Rights, safety, opportunity, privacy, dignity and environmental effects.

MODULE 4

3 Controls

Prevention, detection, response, human oversight and communication.

MODULE 4

4 Decision

Residual risk, conditions, approvals, review date and owner.

MODULE 4

THE POINT

The assessment should change the design; a form completed after launch is not risk management.

© 2026 Tertiary Infotech Academy Pte Ltd

Risk statement anatomy

1 Cause

Because of a data, model, user, vendor or process weakness…

MODULE 4

2 Event

…the AI system may produce or enable an unsafe outcome…

MODULE 4

3 Impact

…leading to a defined harm for specific stakeholders.

MODULE 4

4 Control gap

Existing controls may fail because their coverage or evidence is weak.

MODULE 4

THE POINT

Specific risk statements lead to testable controls; vague labels such as 'bias risk' do not.

© 2026 Tertiary Infotech Academy Pte Ltd

Control design

1 Prevent

Block prohibited data, unsafe actions or unapproved deployments.

MODULE 4

2 Detect

Monitor drift, anomalies, harmful outputs, complaints and access.

MODULE 4

3 Respond

Pause, contain, correct, notify, investigate and restore safely.

MODULE 4

4 Recover

Rollback, retrain, revalidate and confirm residual risk.

MODULE 4

THE POINT

Use defence in depth; a single filter or reviewer is a fragile point of failure.

© 2026 Tertiary Infotech Academy Pte Ltd

Validation evidence stack

1 Technical

Performance, fairness, robustness, privacy and security test results.

MODULE 4

2 Human factors

Comprehension, workload, automation bias and accessibility tests.

MODULE 4

3 Operational

Runbooks, logging, fallback, incident and business-continuity exercises.

MODULE 4

4 Governance

Approvals, exceptions, model/data cards, contracts and audit evidence.

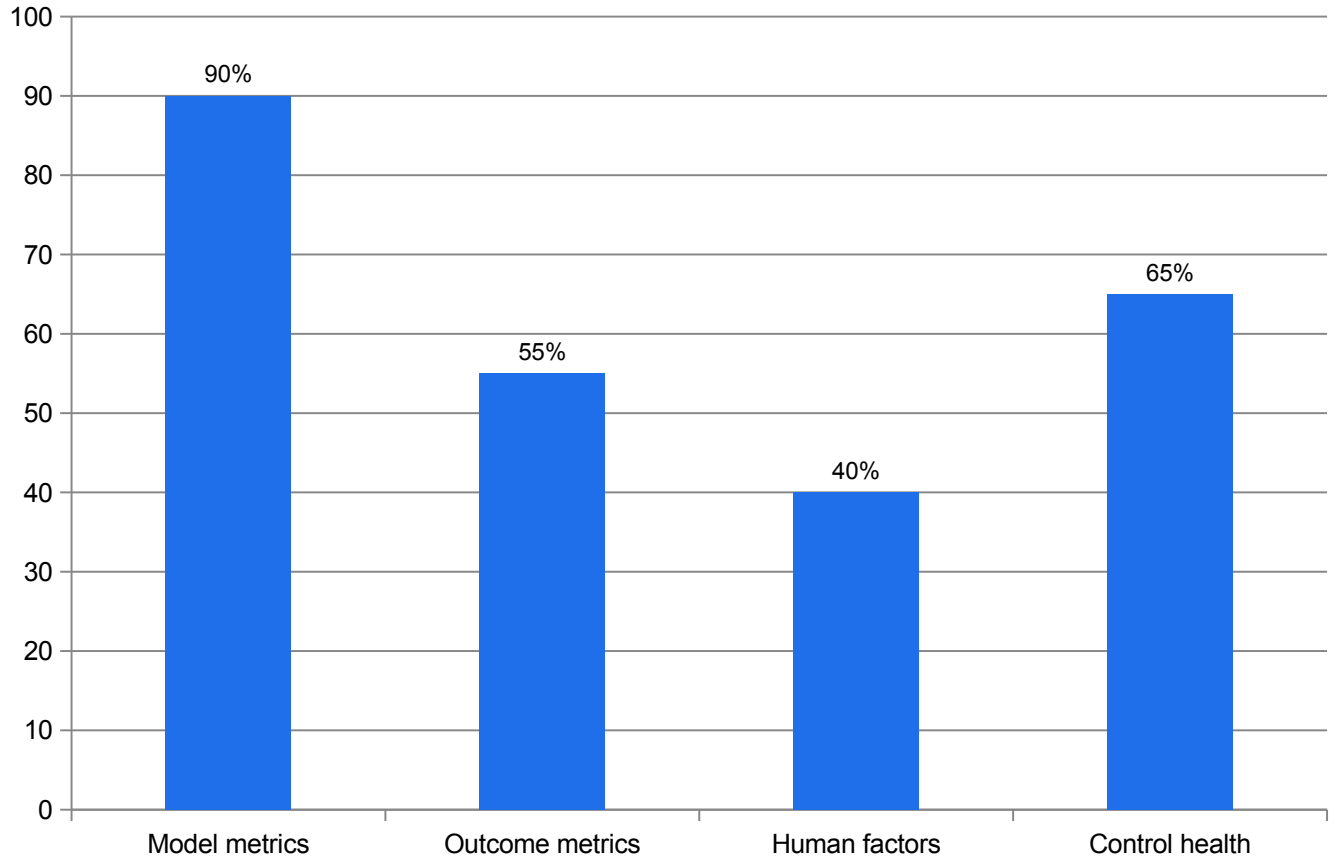

MODULE 4

THE POINT

A benchmark score is necessary evidence, but never sufficient evidence for responsible deployment.

© 2026 Tertiary Infotech Academy Pte Ltd

Production monitoring

Inputs

Population shift, missingness, sensitive data and prompt patterns.

Outputs

Error, toxicity, fairness gaps, confidence and unsafe actions.

Outcomes

Real-world benefit, harm, complaints, appeals and override rates.

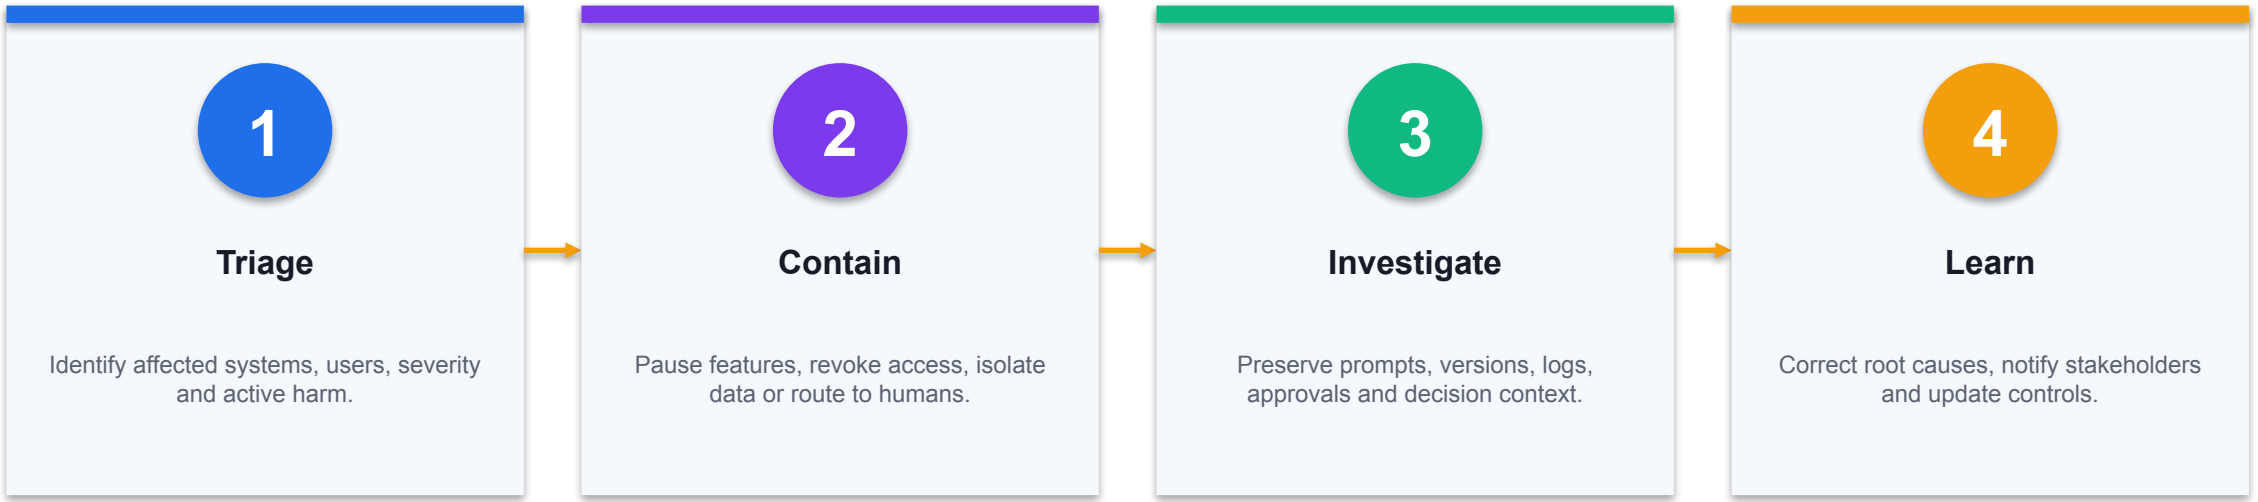

Controls

Guardrail coverage, reviewer quality, alert latency and remediation time.

A technically mature dashboard can still under-measure human outcomes and reviewer effectiveness.

© 2026 Tertiary Infotech Academy Pte Ltd

AI incident response

AI incidents demand both technical response and a human-impact response.

© 2026 Tertiary Infotech Academy Pte Ltd

Change and retirement

1 Triggers

New model, data, prompt, vendor, use, market or legal requirement.

MODULE 4

2 Revalidation

Re-run tests proportional to the change and its risk.

MODULE 4

3 Rollback

Keep a tested route to the last approved safe version.

MODULE 4

4 Retirement

Archive evidence, delete data appropriately and inform dependent users.

MODULE 4

THE POINT

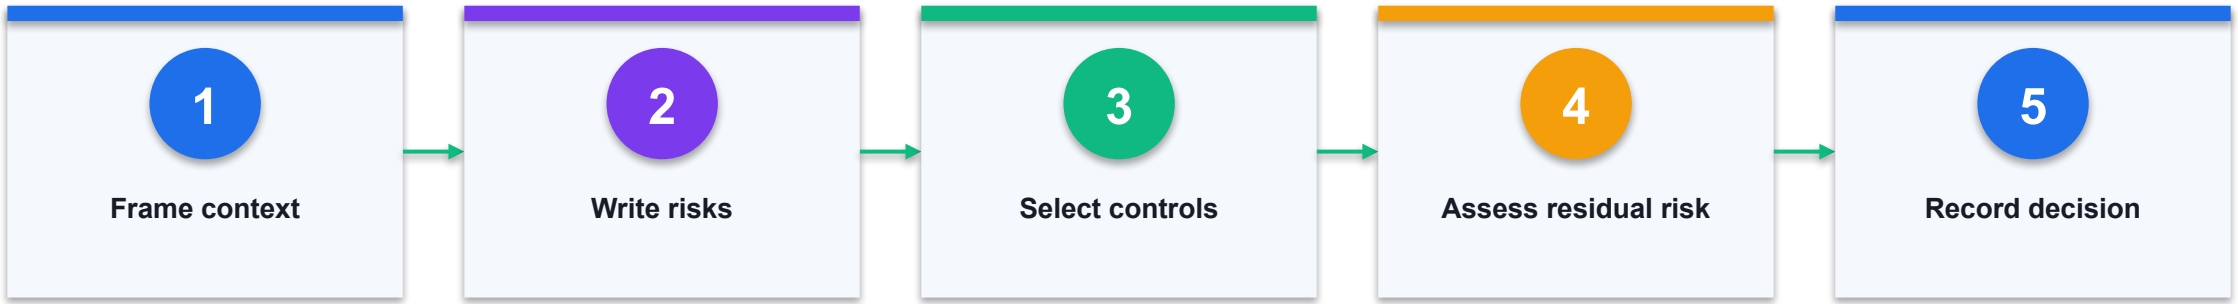

A material change creates a new risk decision; version numbers alone do not preserve assurance.

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 4 · 50 MIN

Complete an AI Impact Assessment and Risk Register

Apply the governance lifecycle to assess impact, select controls and make a recorded go/no-go decision (A1, A3).

YOU'LL PRODUCE **AI impact assessment, risk register and stage-gate decision**

Tools: Prompt PDF, impact template, risk register CSV · Detailed procedure: Learner Guide, Activity 4

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 4 · ACCEPTANCE CHECK

Verify · Complete an AI Impact Assessment and Risk Register

PASS WHEN The assessment connects context, harms, controls, evidence, residual risk and an accountable decision with conditions.

- ✓ Alternatives considered
- ✓ Six specific risk statements
- ✓ Controls cover four modes
- ✓ Residual risk is rescored
- ✓ Decision and review date recorded

If evidence is incomplete, record the gap, owner and due date—do not mark the control effective.

© 2026 Tertiary Infotech Academy Pte Ltd

COURSE PAUSE

00

End of Day 1

Review and reflect

© 2026 Tertiary Infotech Academy Pte Ltd

MODULE 5 · K3 · K4 · A1

05

Fairness and Explainability

Measure disparities and explain decisions without false certainty

© 2026 Tertiary Infotech Academy Pte Ltd

Bias enters at every stage

1 Historical

Past inequity is encoded in outcomes used as labels.

MODULE 5

2 Representation

Some groups or contexts are absent or under-sampled.

MODULE 5

3 Measurement

Proxies and labels differ in quality across groups.

MODULE 5

4 Deployment

Users apply a model outside its tested context or over-trust it.

MODULE 5

THE POINT

Removing a protected field does not remove proxies, structural inequity or deployment bias.

© 2026 Tertiary Infotech Academy Pte Ltd

Read a confusion matrix

1 True positive

A positive case is correctly identified.

MODULE 5

2 False positive

A negative case is incorrectly flagged positive.

MODULE 5

3 True negative

A negative case is correctly identified.

MODULE 5

4 False negative

A positive case is missed—often the costliest error.

MODULE 5

THE POINT

Fairness analysis begins by asking which error creates harm for whom.

© 2026 Tertiary Infotech Academy Pte Ltd

Fairness metrics

1 Demographic parity

Positive decision rates are comparable across groups.

MODULE 5

2 Equal opportunity

True-positive rates are comparable across groups.

MODULE 5

3 Equalised odds

Both true-positive and false-positive rates are comparable.

MODULE 5

4 Calibration

A given score has comparable meaning across groups.

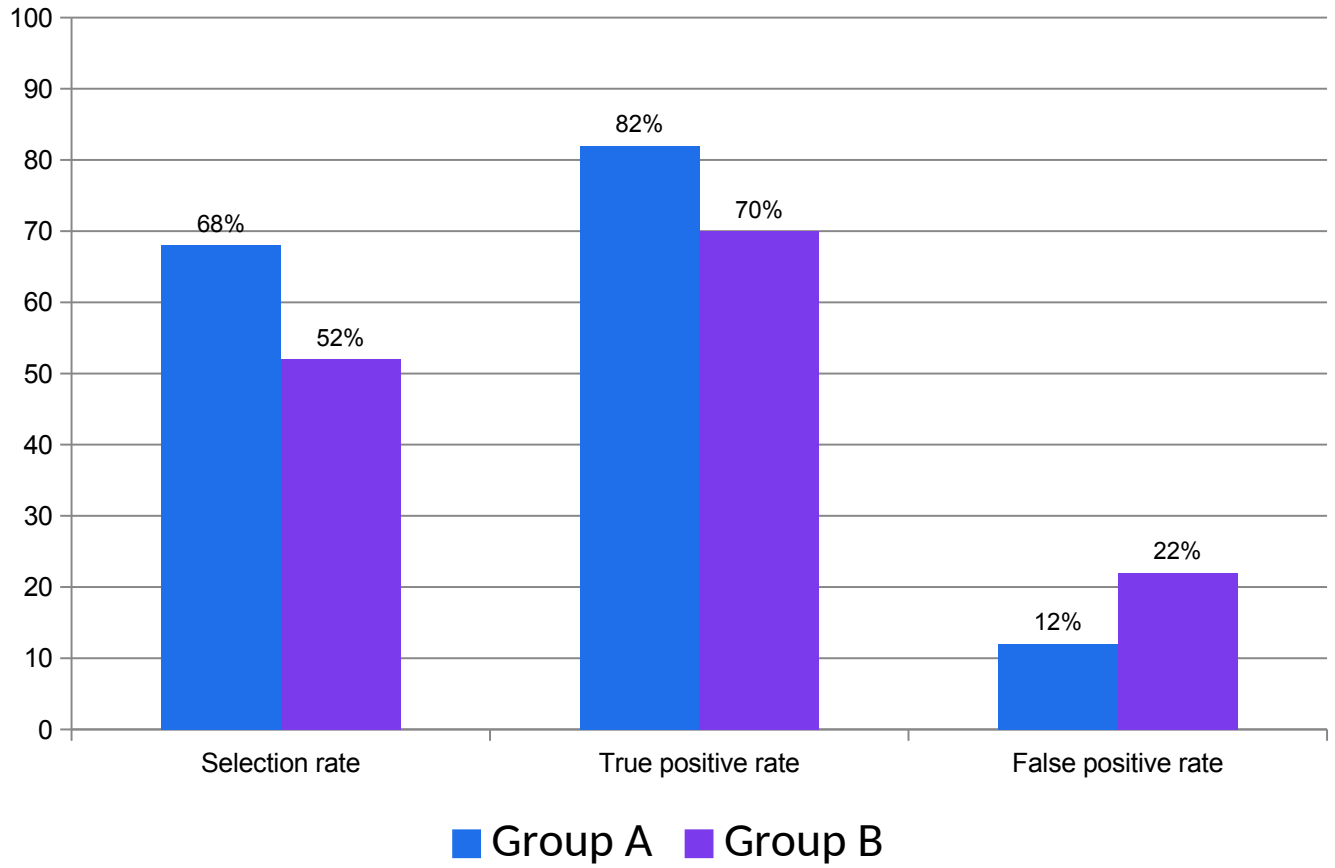

MODULE 5

THE POINT

Metrics can conflict; select and justify the one aligned to the use case and harm model.

© 2026 Tertiary Infotech Academy Pte Ltd

Fairness dashboard

Selection rate

Group A 68% versus Group B 52% indicates outcome disparity.

True-positive rate

Group A 82% versus Group B 70% indicates missed opportunity.

False-positive rate

Group A 12% versus Group B 22% indicates excess burden.

Response

Investigate data, thresholds, features and process—not just the metric.

Group B has a lower selection and true-positive rate, but a higher false-positive rate.

© 2026 Tertiary Infotech Academy Pte Ltd

White-box and black-box explanations

1 White-box

Rules, linear models and small trees can be interpreted directly.

MODULE 5

2 Black-box

Complex ensembles and deep models usually need post-hoc methods.

MODULE 5

3 Global

Describe overall behaviour, influential features and population patterns.

MODULE 5

4 Local

Explain why one prediction changed for one instance.

MODULE 5

THE POINT

Model performance and interpretability are not a binary choice; choose evidence proportional to risk.

© 2026 Tertiary Infotech Academy Pte Ltd

LIME, SHAP and PDP

1 **LIME**

Fits a simple local surrogate around one prediction.

MODULE 5

2 **SHAP**

Allocates contribution using Shapley-value reasoning.

MODULE 5

3 **PDP**

Shows the average marginal relationship between a feature and prediction.

MODULE 5

4 **Caution**

Correlation, unstable explanations and feature dependence can mislead.

MODULE 5

THE POINT

Explainability methods reveal model behaviour; they do not prove causality or fairness.

© 2026 Tertiary Infotech Academy Pte Ltd

Counterfactual explanations

1 Question

What minimal change would alter this outcome?

MODULE 5

2 Use

Give an affected person a concrete, actionable reason.

MODULE 5

3 Constraint

Changes must be feasible, lawful and not shift burden unfairly.

MODULE 5

4 Risk

A technically valid counterfactual may recommend an impossible life change.

MODULE 5

THE POINT

A useful explanation respects human agency and the real-world ability to act.

© 2026 Tertiary Infotech Academy Pte Ltd

Documentation for explainability

1 Model card

Intended use, performance, limits, groups and evaluation results.

MODULE 5

2 Data sheet

Provenance, consent, composition, processing and known gaps.

MODULE 5

3 System card

End-to-end behaviour, safeguards, tests and deployment context.

MODULE 5

4 Decision notice

Plain-language reason, human contact and contest route.

MODULE 5

THE POINT

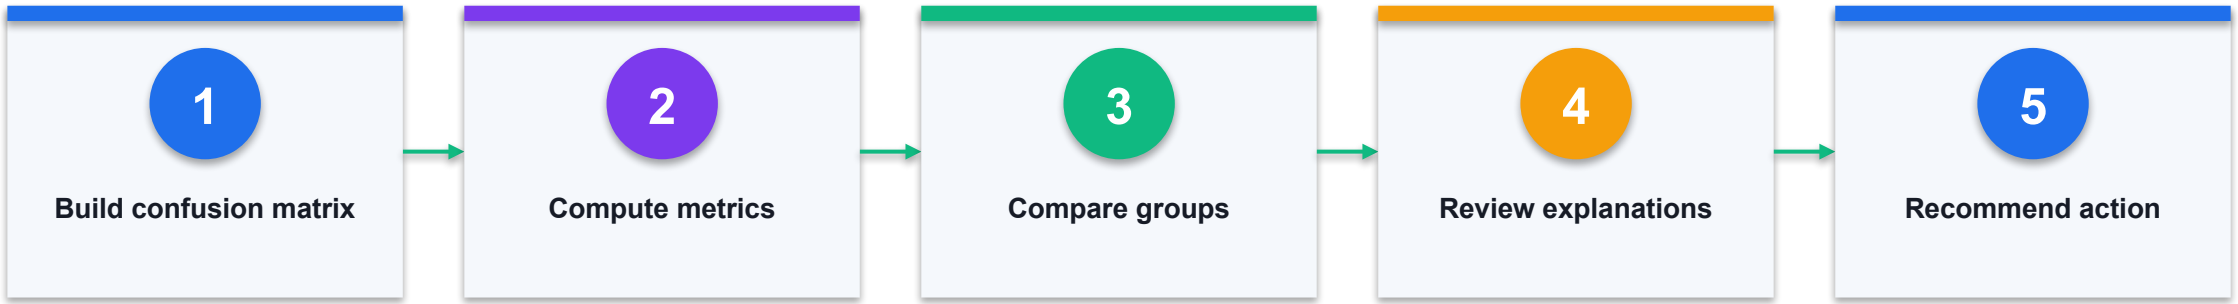

Match documentation to audience while keeping every claim traceable to evidence.

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 5 · 60 MIN

Audit Fairness and Explainability

Compute group-level fairness indicators, interpret explanations and recommend proportionate mitigations (A1, A2).

YOU'LL PRODUCE **Fairness scorecard and explanation review**

Tools: Spreadsheet, fairness-data.csv, explanation samples · Detailed procedure: Learner Guide, Activity 5

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 5 · ACCEPTANCE CHECK

Verify · Audit Fairness and Explainability

PASS WHEN **The scorecard shows correct metrics by group, interprets harm cautiously and connects mitigation to an owner and monitoring rule.**

- ✓ Confusion matrices reconcile
- ✓ At least four metrics per group
- ✓ Metric choice is justified
- ✓ No causal claim from correlation
- ✓ Explanation supports contestability

If evidence is incomplete, record the gap, owner and due date—do not mark the control effective.

© 2026 Tertiary Infotech Academy Pte Ltd

MODULE 6 · K4 · A2

06

Data Governance and Privacy

Make provenance, quality, access and retention governable

© 2026 Tertiary Infotech Academy Pte Ltd

Data governance for AI

1 Ownership

Data owner approves purpose, access, quality thresholds and retention.

MODULE 6

2 Provenance

Record source, collection method, licence, consent and transformations.

MODULE 6

3 Quality

Measure completeness, accuracy, timeliness, consistency and representativeness.

MODULE 6

4 Control

Enforce classification, access, sharing, retention and deletion.

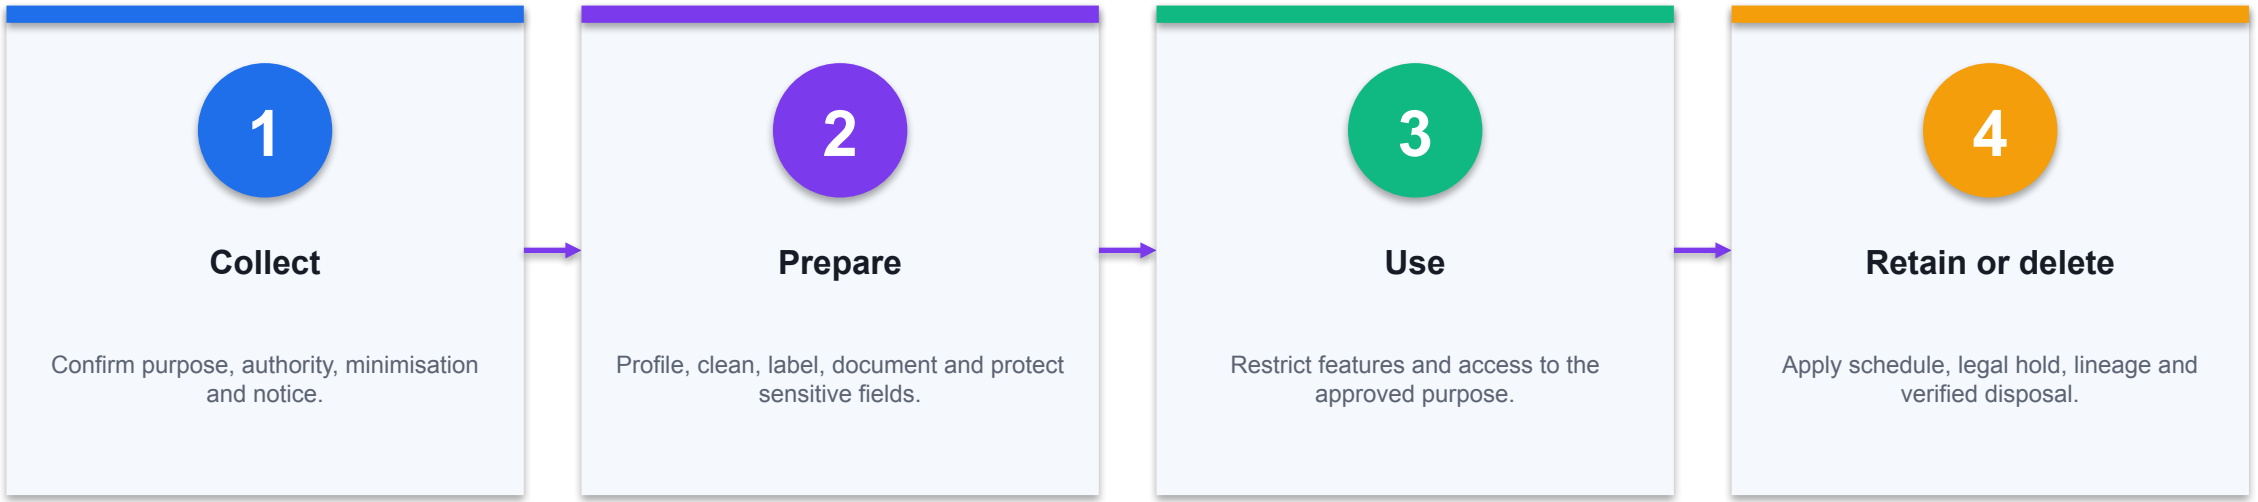

MODULE 6

THE POINT

A model is only as governable as the evidence chain behind its data.

© 2026 Tertiary Infotech Academy Pte Ltd

AI data lifecycle

Each hand-off needs a recorded owner, allowed purpose and control state.

© 2026 Tertiary Infotech Academy Pte Ltd

Data lineage

1 Source

Where did the data originate and under what authority?

MODULE 6

2 Transform

Which joins, filters, labels and feature engineering changed it?

MODULE 6

3 Model

Which dataset version trained or evaluated which model version?

MODULE 6

4 Outcome

Which data and model version influenced a specific decision?

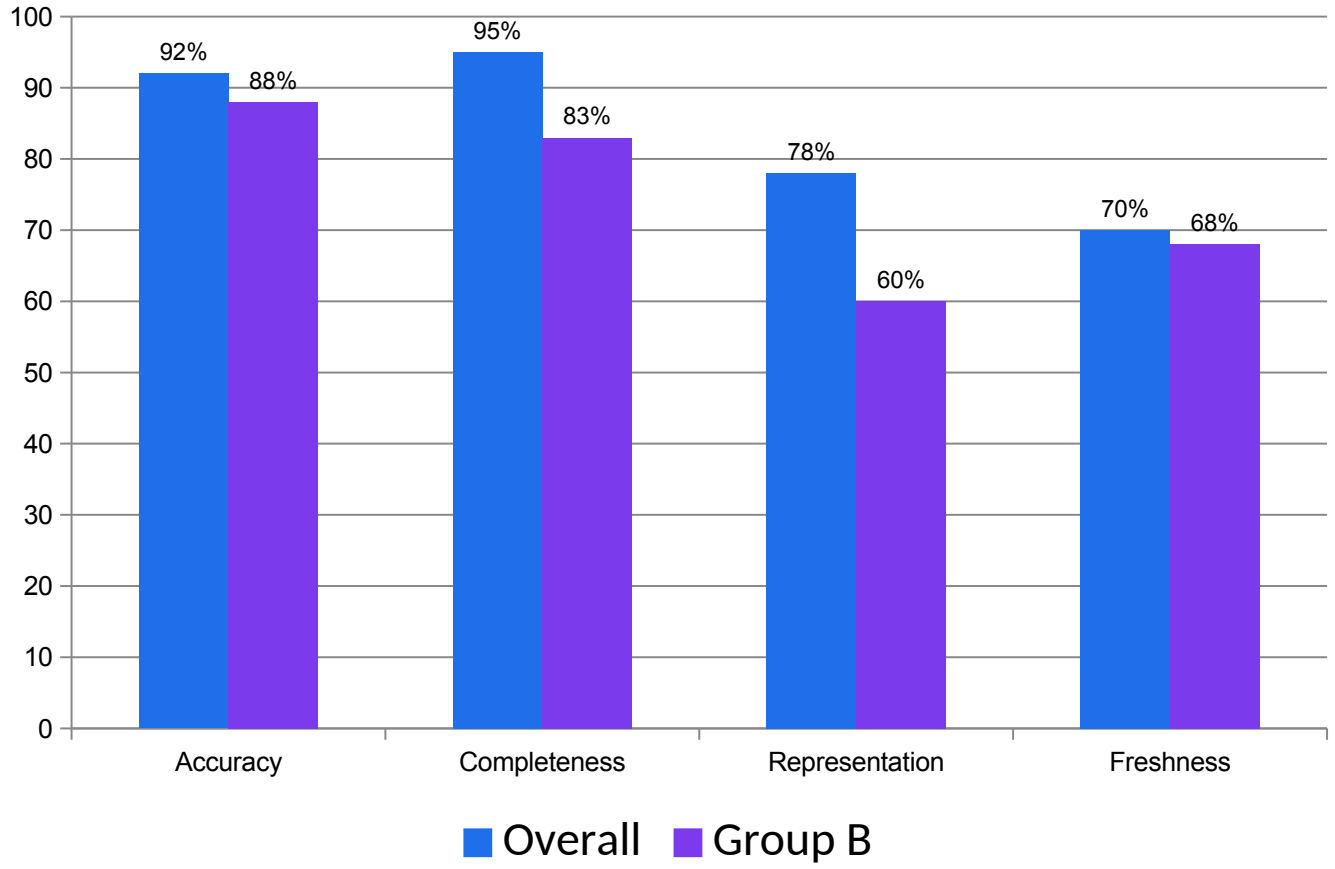

MODULE 6

THE POINT

Lineage turns an unrepeatable result into an auditable decision chain.

© 2026 Tertiary Infotech Academy Pte Ltd

Data quality is contextual

Accuracy

Values reflect the real-world attribute closely enough for purpose.

Completeness

Missingness is measured overall and by relevant group.

Representativeness

Training data covers the population and conditions of use.

Freshness

Update frequency matches how quickly the phenomenon changes.

Aggregate quality can hide a material representation gap for a subgroup.

© 2026 Tertiary Infotech Academy Pte Ltd

Privacy threat patterns

1 Linkage

Quasi-identifiers reconnect de-identified records to individuals.

MODULE 6

2 Membership inference

An attacker infers whether a person was in training data.

MODULE 6

3 Model inversion

Outputs reveal sensitive attributes or representative records.

MODULE 6

4 Prompt leakage

Users expose personal or confidential data to a generative system.

MODULE 6

THE POINT

De-identification reduces risk; it does not automatically make data anonymous or unrestricted.

© 2026 Tertiary Infotech Academy Pte Ltd

Privacy-enhancing techniques

1 K-anonymity

Generalise quasi-identifiers so each record resembles at least k−1 others.

MODULE 6

2 Differential privacy

Bound an individual's influence using calibrated randomness.

MODULE 6

3 Federated learning

Train across locations without centralising raw data.

MODULE 6

4 Synthetic data

Generate representative records while testing disclosure and bias risk.

MODULE 6

THE POINT

Choose a technique by threat model; every privacy method introduces utility and implementation trade-offs.

© 2026 Tertiary Infotech Academy Pte Ltd

Access, retention and deletion

1 Least privilege

Grant only the data and action needed for the role.

MODULE 6

2 Separation

Keep production data away from experimentation and public tools.

MODULE 6

3 Retention

Set period, trigger, owner and approved exceptions.

MODULE 6

4 Deletion

Remove copies, embeddings, caches and backups where required.

MODULE 6

THE POINT

A deleted source file may survive in a vector store, fine-tune, cache or derived feature table.

© 2026 Tertiary Infotech Academy Pte Ltd

Data governance evidence

1 Data inventory

Dataset, owner, purpose, sensitivity, location and retention.

MODULE 6

2 Data sheet

Composition, collection, preprocessing, limitations and licences.

MODULE 6

3 Quality report

Thresholds, exceptions and group-level results.

MODULE 6

4 Access log

Who accessed which data, why, when and what changed.

MODULE 6

THE POINT

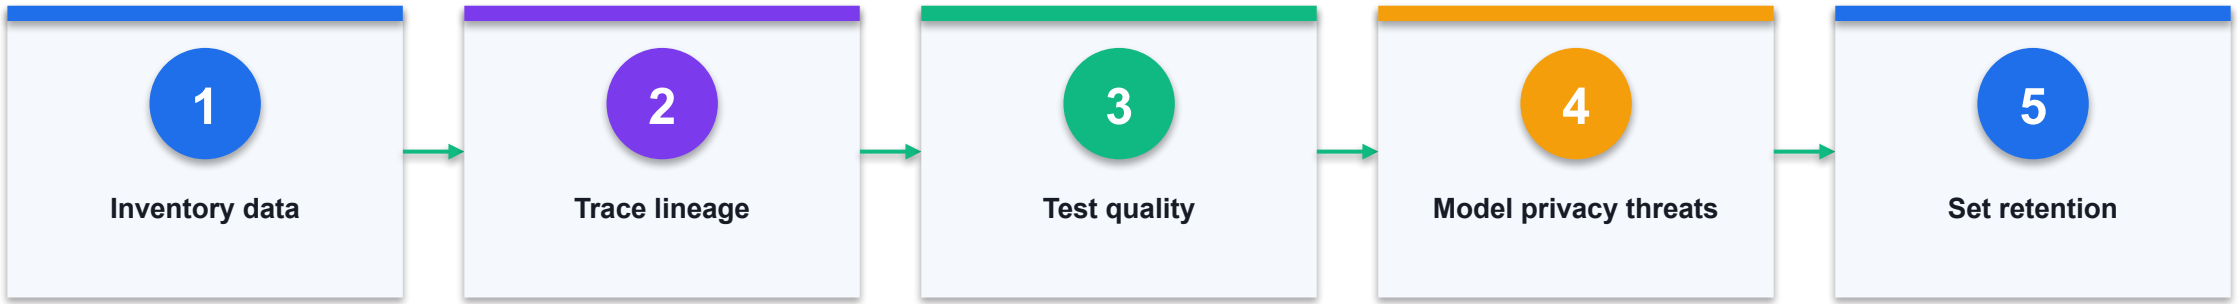

Evidence should allow an independent reviewer to reconstruct the data decision.

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 6 · 45 MIN

Design Data Governance and Privacy Controls

Review AI data lineage, quality, privacy threats, access and retention controls (A2).

YOU'LL PRODUCE **Data sheet, lineage map and privacy control plan**

Tools: Prompt PDF, data inventory, lineage CSV, DPIA checklist · Detailed procedure: Learner Guide, Activity 6

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 6 · ACCEPTANCE CHECK

Verify · Design Data Governance and Privacy Controls

PASS WHEN The data plan can reconstruct provenance and sets measurable quality, access, privacy, retention and deletion requirements.

- ✓ Purpose and authority recorded
- ✓ Lineage reaches model decision
- ✓ Quality measured by group
- ✓ PET maps to threat
- ✓ Derived copies included in deletion

If evidence is incomplete, record the gap, owner and due date—do not mark the control effective.

© 2026 Tertiary Infotech Academy Pte Ltd

MODULE 7 · K4 · A2

07

Generative AI Security and Copyright

Secure the data-model-application-human stack

© 2026 Tertiary Infotech Academy Pte Ltd

A Layered Generative AI Security Model

Data

Provenance, access, poisoning and privacy.

Model

Provider, weights, prompts and evaluation.

Application

Retrieval, tools and output handling.

Human

Oversight, use policy and incident response.

Assume every layer can fail; design overlapping controls.

© 2026 Tertiary Infotech Academy Pte Ltd

Generative AI expands the attack surface

1 Data plane

Training, fine-tuning, RAG and conversation data can be poisoned or leaked.

MODULE 7

2 Model plane

Weights, prompts, adapters and model endpoints can be stolen or manipulated.

MODULE 7

3 Application plane

Tools, plugins, parsers and output consumers inherit unsafe content.

MODULE 7

4 Human plane

Users may over-trust fluent output or disclose sensitive information.

MODULE 7

THE POINT

Treat the generative AI service as an untrusted component inside a controlled system.

© 2026 Tertiary Infotech Academy Pte Ltd

OWASP LLM Top 10: input and data

1 Prompt injection

Direct or indirect instructions override intended behaviour.

MODULE 7

2 Sensitive disclosure

The system reveals private, confidential or regulated information.

MODULE 7

3 Supply chain

Models, datasets, packages and providers introduce hidden risk.

MODULE 7

4 Data/model poisoning

Manipulated data or artefacts corrupt behaviour or create backdoors.

MODULE 7

THE POINT

Input filtering alone cannot solve prompt injection; constrain privileges, data and downstream actions.

© 2026 Tertiary Infotech Academy Pte Ltd

OWASP LLM Top 10: output and agency

1 Improper output handling

Unsafe model output reaches code, queries, browsers or users.

MODULE 7

2 Excessive agency

The model can perform actions beyond minimum necessary privileges.

MODULE 7

3 System prompt leakage

Hidden instructions are exposed and mistaken for a security boundary.

MODULE 7

4 Unbounded consumption

Inputs or loops exhaust cost, compute, time or service capacity.

MODULE 7

THE POINT

Validate model output at the trust boundary and require approval for high-impact actions.

© 2026 Tertiary Infotech Academy Pte Ltd

RAG and vector-store risks

1 Poisoned documents

Malicious content steers retrieval or injects hidden instructions.

MODULE 7

2 Access bleed

Chunks from one user, tenant or classification reach another.

MODULE 7

3 Embedding leakage

Vector representations can expose sensitive relationships.

MODULE 7

4 Stale knowledge

Outdated or revoked documents remain retrievable.

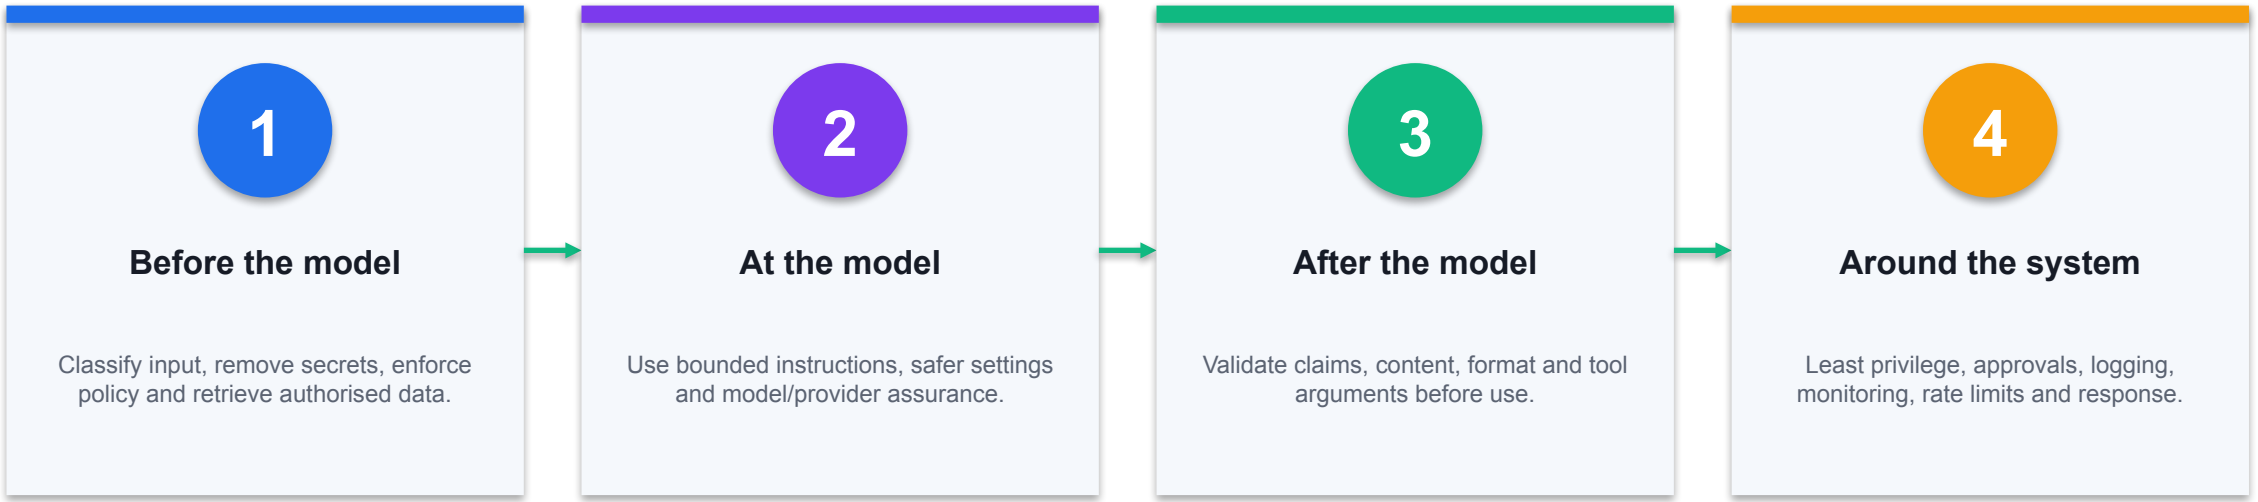

MODULE 7

THE POINT

Carry identity, permissions, provenance and expiry from source document to every chunk and retrieval.

© 2026 Tertiary Infotech Academy Pte Ltd

Layered generative AI controls

Defence in depth assumes every individual guardrail will eventually fail.

© 2026 Tertiary Infotech Academy Pte Ltd

Hallucination and misinformation

1 Cause

The model generates probable language, not verified truth.

MODULE 7

2 Exposure

Open-ended questions and missing evidence increase uncertainty.

MODULE 7

3 Control

Ground responses, cite sources, verify claims and calibrate refusal.

MODULE 7

4 Oversight

Route consequential content to qualified human review.

MODULE 7

THE POINT

Fluency is not evidence; require provenance for claims that drive decisions.

© 2026 Tertiary Infotech Academy Pte Ltd

Copyright across the GenAI lifecycle

1 Training input

Check source rights, licences, consent, exceptions and contractual limits.

MODULE 7

2 Prompt input

Do not upload protected or confidential content without authority.

MODULE 7

3 Generated output

Assess similarity, attribution, ownership terms and intended use.

MODULE 7

4 Publication

Keep provenance records and review high-risk commercial outputs.

MODULE 7

THE POINT

Copyright risk depends on jurisdiction and facts; governance should preserve provenance and enable review.

© 2026 Tertiary Infotech Academy Pte Ltd

Security architecture evidence

1 Threat model

Assets, actors, trust boundaries, abuse cases and mitigations.

MODULE 7

2 Evaluation

Prompt-attack, leakage, output, access and cost tests.

MODULE 7

3 Telemetry

Prompt category, retrieval source, tool call, approval and outcome logs.

MODULE 7

4 Runbook

Containment, key rotation, corpus purge, rollback and notification.

MODULE 7

THE POINT

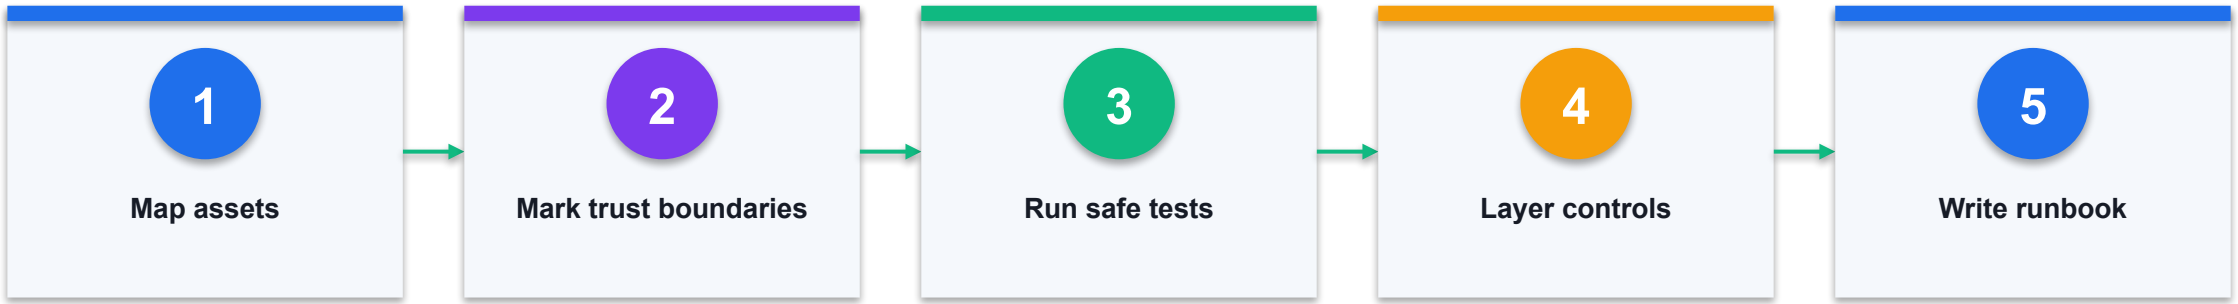

A secure design can show which layer stops each threat and what evidence proves it.

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 7 · 50 MIN

Threat-Model a Generative AI Assistant

Apply layered generative AI security, privacy and copyright controls (A2).

YOU'LL PRODUCE **Threat model, adversarial prompt results and control architecture**

Tools: Prompt PDF, architecture.json, attack prompts, control checklist · Detailed procedure: Learner Guide, Activity 7

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 7 · ACCEPTANCE CHECK

Verify · Threat-Model a Generative AI Assistant

PASS WHEN The threat model covers data, model, application and human layers; every high-risk abuse case has multiple controls and evidence.

- ✓ Trust boundaries drawn
- ✓ OWASP risks mapped
- ✓ No real secrets used
- ✓ Tool permissions are least privilege
- ✓ Copyright and incident controls included

If evidence is incomplete, record the gap, owner and due date—do not mark the control effective.

MODULE 8 · A2 · A3

08

Human Oversight and Accountability

Keep meaningful human control where consequences matter

© 2026 Tertiary Infotech Academy Pte Ltd

HUMAN CONTROL

Meaningful Human Oversight

Understand

Reviewer sees evidence and uncertainty.

Challenge

Reviewer can disagree without friction.

Intervene

Reviewer can pause, override or escalate.

Learn

Overrides and outcomes improve the system.

Human presence matters only when it changes decisions and outcomes.

© 2026 Tertiary Infotech Academy Pte Ltd

Human involvement models

1 Human-in-the-loop

A person approves each consequential recommendation before action.

MODULE 8

2 Human-on-the-loop

AI acts within bounds while a person supervises and can intervene.

MODULE 8

3 Human-out-of-the-loop

AI acts without real-time review; reserve for low-risk, reversible tasks.

MODULE 8

4 Human-in-command

People set goals, limits, authority, escalation and shutdown conditions.

MODULE 8

THE POINT

Meaningful oversight depends on power, information, time and competence—not the presence of a checkbox.

© 2026 Tertiary Infotech Academy Pte Ltd

Choose oversight by risk

1 Severity

Greater potential harm requires stronger review and authority.

MODULE 8

2 Reversibility

Irreversible outcomes require intervention before action.

MODULE 8

3 Uncertainty

Novel contexts and weak confidence increase escalation.

MODULE 8

4 Scale

High-volume decisions need sampling, monitoring and systemic safeguards.

MODULE 8

THE POINT

Automate low-risk routine decisions; preserve human approval for high-impact exceptions.

© 2026 Tertiary Infotech Academy Pte Ltd

Design a meaningful review

1 Information

Show evidence, uncertainty, alternatives and policy—not only a score.

MODULE 8

2 Time

Give the reviewer enough time to understand and challenge the result.

MODULE 8

3 Authority

Allow override, pause, escalation and correction without penalty.

MODULE 8

4 Competence

Train reviewers and monitor the quality of their decisions.

MODULE 8

THE POINT

A reviewer who cannot understand or change the decision is not an effective control.

© 2026 Tertiary Infotech Academy Pte Ltd

Automation bias and rubber-stamping

1 Anchoring

The AI recommendation becomes the default starting point.

MODULE 8

2 Complacency

Repeated correct outputs reduce vigilance over time.

MODULE 8

3 Asymmetry

Overriding the model takes more effort or creates perceived blame.

MODULE 8

4 Countermeasure

Hide score initially, require reasons, sample reviews and measure overrides.

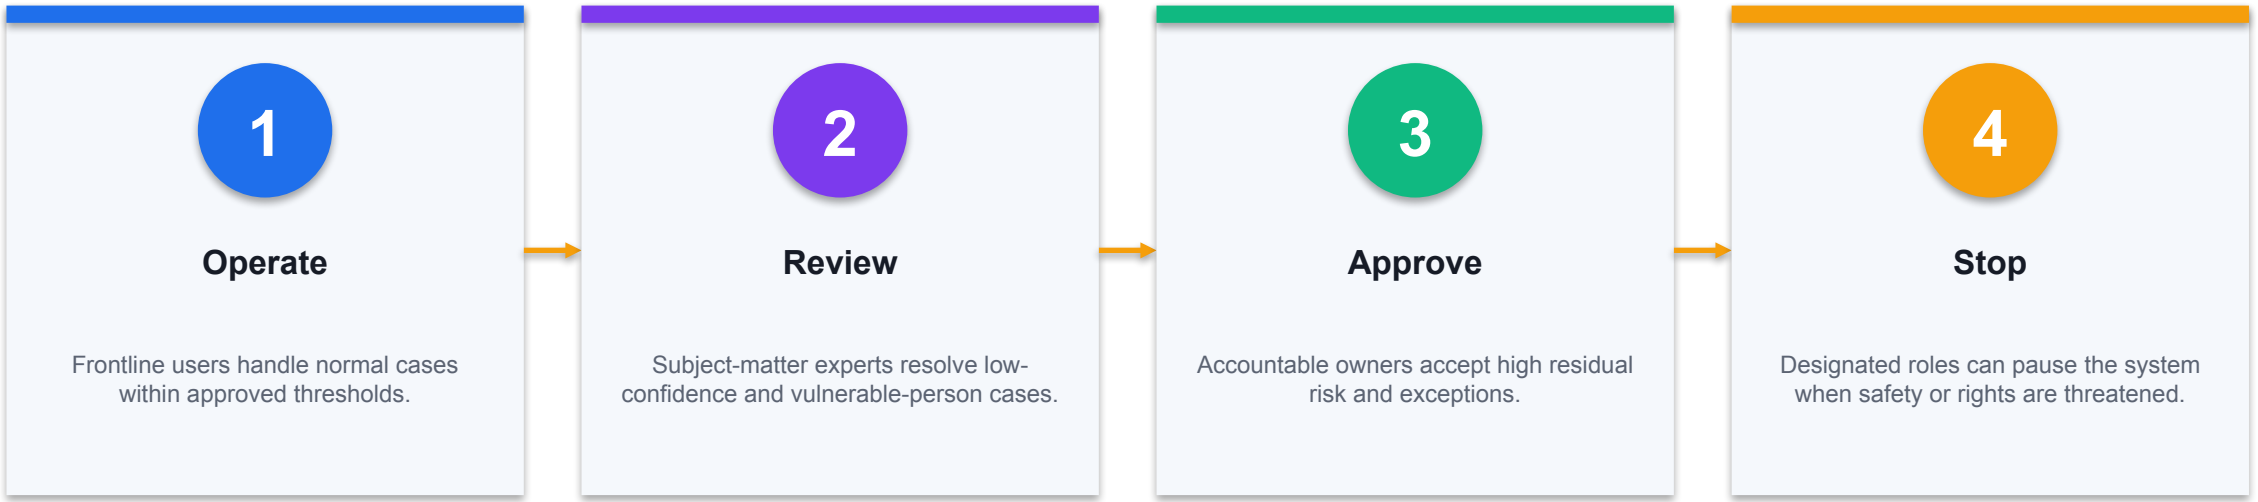

MODULE 8

THE POINT

Human review can create false assurance unless the interface and incentives support genuine challenge.

© 2026 Tertiary Infotech Academy Pte Ltd

Decision rights and escalation

Every boundary needs a trigger, response time, owner and fallback.

© 2026 Tertiary Infotech Academy Pte Ltd

RACI for AI governance

1 Responsible

Performs the task and produces the evidence.

MODULE 8

2 Accountable

Owns the outcome and has final decision authority.

MODULE 8

3 Consulted

Provides specialist input before the decision.

MODULE 8

4 Informed

Receives the outcome and relevant changes.

MODULE 8

THE POINT

There should be one accountable owner for each material risk decision.

© 2026 Tertiary Infotech Academy Pte Ltd

Audit trail and contestability

1 Trace

Record input, model/data version, output, reviewer and final action.

MODULE 8

2 Explain

Provide a reason suited to the affected person's needs.

MODULE 8

3 Correct

Enable factual correction and rerun where appropriate.

MODULE 8

4 Appeal

Offer timely independent review and communicate the outcome.

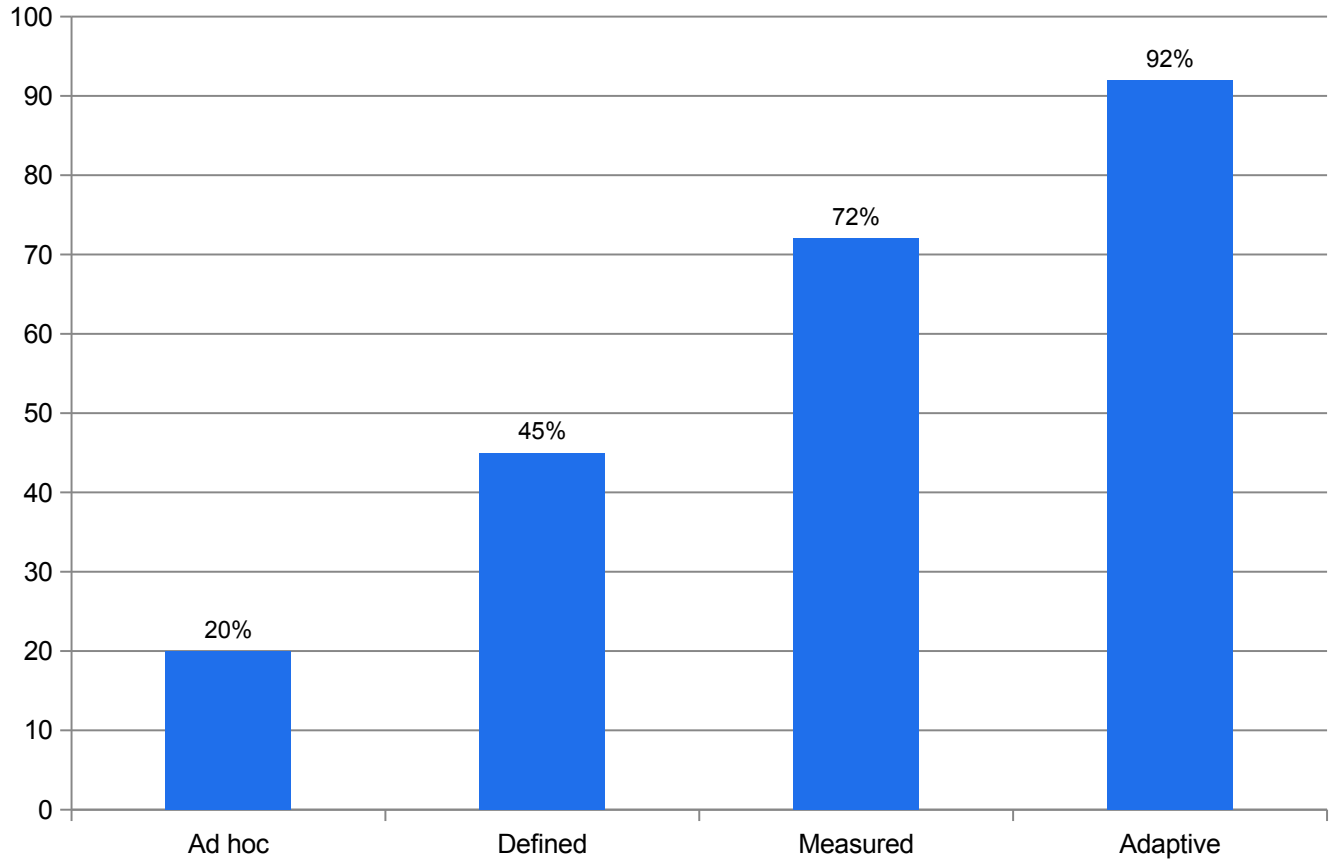

MODULE 8

THE POINT

Redress completes accountability by giving affected people a path from explanation to remedy.

© 2026 Tertiary Infotech Academy Pte Ltd

Governance maturity roadmap

Ad hoc

Teams rely on individual judgement and scattered documents.

Defined

Inventory, policy, roles, risk tiers and minimum controls exist.

Measured

Control effectiveness, outcomes, incidents and fairness are monitored.

Adaptive

Evidence drives continuous improvement, challenge and transparent reporting.

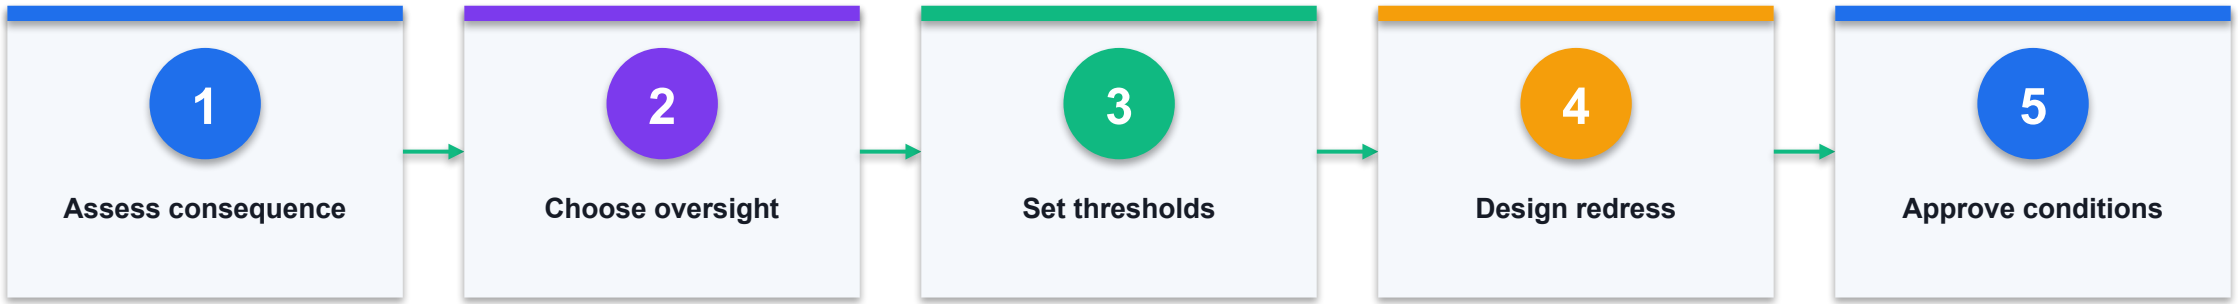

The maturity gain comes from evidence, learning and outcomes—not from producing more policy documents.

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 8 · 30 MIN

Design Human Oversight and a Governance Decision

Select meaningful human involvement, escalation, monitoring and redress for an AI deployment (A2, A3).

YOU'LL PRODUCE **Oversight matrix and governance board decision pack**

Tools: Prompt PDF, decision scenarios, oversight matrix, board template · Detailed procedure: Learner Guide, Activity 8

© 2026 Tertiary Infotech Academy Pte Ltd

ACTIVITY 8 · ACCEPTANCE CHECK

Verify · Design Human Oversight and a Governance Decision

PASS WHEN The oversight design is risk-proportionate, gives reviewers real authority, addresses automation bias and includes contestability and stop conditions.

- ✓ Oversight choice is justified
- ✓ Reviewer has time and authority
- ✓ Escalation thresholds are measurable
- ✓ Appeal and correction exist
- ✓ Board decision records residual risk

If evidence is incomplete, record the gap, owner and due date—do not mark the control effective.

© 2026 Tertiary Infotech Academy Pte Ltd

WRAP-UP

09

From Principles to Practice

Evidence · accountability · continuous improvement

© 2026 Tertiary Infotech Academy Pte Ltd

What You Can Now Do

1 Identify

Recognise principles, stakeholders, harms and governance processes.

COURSE SUMMAR

2 Assess

Tier use cases and complete an AI impact and risk assessment.

COURSE SUMMAR

3 Control

Design fairness, data, security and oversight controls.

COURSE SUMMAR

4 Decide

Present evidence and make a recorded, accountable deployment decision.

COURSE SUMMAR

THE POINT

Responsible AI is a repeatable organisational capability, not a one-off compliance exercise.

Courseware and Assessment Hub

1. Approved courseware
2. Assessment attendance
3. Candidate question papers
4. Secure submission area

© 2026 Tertiary Infotech Academy Pte Ltd

ASSESSMENT

Assessment Reminder

1 WA

4 short-answer questions · K1 –K4 · 1 hour.

ASSESSMENT

2 Case Study

3 scenario questions · A1–A3 · 1 hour.

ASSESSMENT

3 Submit

Upload completed question papers to the LMS.

ASSESSMENT

4 Protect

Do not photograph or distribute assessment content.

ASSESSMENT

THE POINT

Answer keys remain trainer-only and are never attached to learner-facing systems.

© 2026 Tertiary Infotech Academy Pte Ltd

ASSESSMENT DAY

Assessment Flow

Complete the steps in sequence and confirm each submission.

© 2026 Tertiary Infotech Academy Pte Ltd

Digital Attendance (Mandatory)

1 AM attendance

Scan the SSG digital-attendance QR code when the trainer displays it.

TRAQOM

2 PM attendance

Repeat after lunch; confirm the submission screen before closing.

TRAQOM

3 Assessment attendance

Complete the separate assessment attendance at the scheduled time.

TRAQOM

4 Funding requirement

Maintain at least 75% attendance and complete all prescribed assessments.

TRAQOM

THE POINT

TRAQOM attendance is a formal funding record—check each submission before continuing.
